YUDEZIGN

Sales Rep Handbook

Houston · August 2026

Everything you say to a customer comes from Section 1.
If a number here disagrees with the Answer Key, the Answer Key wins.

Answer Key v1.5 · 2026-10-23

Contents

1	**The Answer Key**	Every answer you give a customer
2	**Onboarding Curriculum**	Your first week, then weeks 3–6
3	**Study Links**	Ten videos, two Drive folders, three pages
4	**Sales Strategy**	Who we target, and why
5	**What To Say**	The pitch, the objections, the calls
6	**Sales SOP**	Nine stages, four handoffs
7	**KPIs and Goals**	How you're measured, Aug–Dec
8	**Booth Playbook**	Houston Builders Expo, Aug 11–12
9	**The 48 Hours**	Turning the show into a pipeline

The Answer Key

YuDeZign · Houston sales team · Answer Key v1.5 · 2026-10-23

This is the only document that settles what you say to a customer. If a number appears anywhere else in your pack — the field card, the SOP, the booth playbook — it came from here.

The reason this exists: our own source documents disagree with each other. There are **seven different production lead times** written down across the company, **five different deposit percentages**, and **three different warranty lengths** — including one in the *newest* contract that contradicts the one on our flyers. None of that is your problem to solve. Your job is to say the line in the middle column and nothing else.

> **The rule that keeps you safe:** you are never penalised for saying *"let me confirm that and come back to you today."* You are penalised for guessing. A number you invent to sound confident is the one that ends up in a contract dispute.

How to read a row

STATUS	MEANING	WHAT YOU DO
RULED	Settled from an authoritative source.	Say it. It's live.
PROVISIONAL	The best-supported reading of the documents we have, adopted so you aren't stuck. **Expires Sept 1, 2026** pending formal sign-off.	Say it. Expect it to be re-confirmed.
BLOCKED	Binds the company legally or financially and is not yet signed off.	**Say the deflection, word for word. Do not improvise.**

Who decides what

Nobody expects you to hold these answers yourself. What matters is knowing **where each one lives**, so you route it in one move instead of guessing.

QUESTION TYPE	WHERE THE ANSWER ACTUALLY COMES FROM	HOW YOU ROUTE IT
Product, construction, dimensions, finishes	The 2026 spec of record — already in this document	You answer it. That's what §2–4 are for
Price on a specific job	The quote team, as a versioned quote	Submit a Discovery Sheet
Discounts, trade pricing, tier	Management — reps have no discount authority	Route through the office, same day
Deposit, payment terms, warranty	The signed agreement, and it is being confirmed	Deflect (§5, §7), then flag it to the office
Delivery dates on a large job	Operations — they hold the plant schedule	Ask before you say a date out loud
Claims, damage, missing parts	orders@yudezign.com	Email same day, copy the office

"Let me confirm that and come back to you today" is a complete, professional answer to anything in the bottom four rows. Customers hear it from good reps constantly. What they remember is whether

you actually came back.

Rows tagged name a **never-say** phrase so you can recognise it. The tag also tells our copy checker to allow the forbidden words on that line — that is the only place they are allowed to appear in this pack.

---

1 · The never-say list

Read this out loud once. These are not style preferences; each one is a live commercial or legal exposure.

NEVER SAY	SAY INSTEAD	WHY
Any production time in days or weeks — “seven to ten business days”, “two to four weeks”, “one week”	“In as little as two weeks, depending on finish and scale.”	Seven conflicting figures exist and **both signed contracts disclaim delivery deadlines outright**
Any deposit percentage	“Terms come in writing with your agreement — I’ll walk you through it.”	Five different figures exist across live documents
“Lifetime warranty”	“Your written warranty comes with your agreement.”	Applies only to a series name we no longer sell
“We install” / “installation included”	“Install support” everywhere · “installation through our partner contractors, inside Greater Houston, on a separate detailed install quote”	Both contracts state YuDeZign itself does not perform installation; partner contractors do, inside Greater Houston, on a quote (Damian, 2026-10-23)
Any dealer tier, discount percentage or multiplier	“Trade pricing is set per account — let me get an account opened for you and come back with your numbers.”	Internal buy prices. Never leaves the building
What a board or a sheet costs us	Nothing. Change the subject to value.	Never appears on any customer- or contractor-facing output
“19 mm”	“Three-quarter-inch plywood”	US market speaks inches. **Say ¾″ even when the flyer in your hand says 19 mm**
“3D design and quote in 24 hours”	“I’ll give you a date when I take your dimensions.”	Source is a 2020 dealer deck; unconfirmed
“Hettich hardware as standard”	Name the line’s actual hardware (§3)	Contradicts the 2026 spec of record
Solid wood shaker doors	“Our shaker is machined from MDF — dimensionally stable, takes paint beautifully.”	**You must volunteer this.** See §2
A job we have quoted but not won, named as a reference	Name only **delivered** work. For scale, say *”we quote multi-family packages up to fifty-plus units”* — true, and it claims nothing	Buyers check references. One unwon job presented as won costs you the deal *and* the reputation
Any competitor claim you have not personally verified	“What do you like about working with them?” — then write the answer down	We have no competitive intelligence. Don’t invent it
A named dedicated account manager	“You’ll have my direct number, and our order desk.”	We don’t staff dedicated AMs
“Bluebonnet” on a YuDeZign job	Nothing — different company	Separate brand

One more, and it is the easiest to break: never quote a price from memory — with **one sanctioned exception**, the **linear-foot ballpark** in §5. That is spoken, ranged, and carries four conditions every time. Everything else is the quote the quoting team returns, presented by its version number. See §5 and §6.

---

2 · What we make — and what we do not

QUESTION	WHAT YOU SAY	STATUS	SOURCE
What kind of cabinets do you make?	“Frameless — European full-access. No face frame, so you get wider openings and more usable space in the same footprint.”	**RULED**	`product-lines.json` `shared_platform.construction`; 2020 catalog p21
Do you **make** framed / face-frame cabinets?	**”We manufacture frameless only.”** Then sell the reason: wider drawers, full-access interiors, one clean line wall to wall.	**RULED**	Product-study notes: *”We only manufacture Frameless Cabinets”*
Do you **sell** framed cabinets?	**”Yes — we carry a stocked RTA framed line. We don’t build it, we stock it.”** Never lead with this. See the three triggers below	**RULED**	Damian, 2026-08-06
Who makes the framed cabinets, then?	**”That’s a stocked product we carry — our plant runs frameless, that’s what we manufacture. I’d rather you knew which is which.” Volunteer this the moment framed comes up.** Do not wait to be asked	**RULED**	Damian, 2026-08-06 — same disclosure discipline as the shaker rule
When do I bring framed up at all?	Three triggers, and nothing else: **(1)** they need cabinets *now* and cannot wait on a build, **(2)** they specifically want a face-frame look, **(3)** the budget will not reach Essential. Outside those three, sell frameless	**RULED**	Damian, 2026-08-06
What styles / finishes / sizes are in the framed line?	**Deflect.** “We stock a range — let me check what’s actually on the floor for what you need and come back to you today.” **Never quote a style, finish, size or price from memory**	**BLOCKED**	No stock sheet or price list exists yet. Route to the office
Is the framed line assembled?	“Your choice — flat-pack or assembled. It’s priced differently either way, so tell me which and I’ll get you the right number.”	**RULED**	Damian, 2026-08-06
Isn’t buying stock the thing you said competitors do?	**”Fair question. The difference is we’re not *only* a reseller — we manufacture, and the framed line is there so you’re not stuck when a build doesn’t fit your timeline. Everything we make, we make here.”**	**RULED**	Damian, 2026-08-06
What door styles?	“Flat panel — slab — and shaker. Both in ¾″ material.”	**RULED**	Study doc; Booklet p6
Do you do raised-panel or inset?	“No. Raised panel is a specialty build we don’t run, and we don’t do inset doors.”	**RULED**	Study doc
Are your shaker doors real wood?	**”No — we machine ours out of a single piece of MDF. That’s deliberate: MDF doesn’t move with humidity, so the door won’t warp or crack at the joints, and it takes paint better than wood does.”** Then: **”It’s a custom door, it costs more than the slab, and honestly we don’t recommend it. If shaker is the look you want, our stocked framed line**	**RULED**	Study doc — *”we need to be clear that we do not use real wood when we make shaker doors”*; Damian, 2026-10-23: custom shaker is costly and not recommended, shaker buyers usually belong on the stocked framed line

QUESTION	WHAT YOU SAY	STATUS	SOURCE
	gives you a standard five-piece shaker door on a ½″ plywood box at a stock price.”		
What’s the box made of?	“¾″ plywood. Backs and drawer bottoms are ¼″ plywood. If you want to take cost out, we can run the box in particleboard instead.”	**RULED**	Study doc; `shared_platform.box`
How is it held together?	“Cam-and-dowel — three-in-one connectors — so every joint pulls square and stays square. Wall cabinets hang on a French cleat, which is why they land dead level.”	**RULED**	Booklet p7
Soft close?	“Standard. Every door, every drawer. Not an upgrade.”	**RULED**	`shared_platform.soft_close` ; Booklet p7
What overlay?	“Full overlay on kitchens and vanities. Half overlay on closets, so two units can share a panel.”	**RULED**	Study doc
How tall can one cabinet be?	“Ninety-six inches. Plywood comes in 4×8 sheets, so a taller box would need a sheet that doesn’t exist. Above that we stack.”	**RULED**	Study doc
Edge banding?	“One millimetre, colour-matched to the surface. It seals the core against moisture and it makes the panel read as one piece.”	**RULED**	Showcase flyers; study doc
What rooms do you do?	“Kitchens, walk-in and reach-in closets, vanities including ADA, mudrooms, credenzas, coffee bars, laundry, offices, media walls — and multi-family and commercial casework.”	**RULED**	`yudezign.template.html` “What We Build”

Standard dimensions — memorise these

	DEPTH	HEIGHT	WIDTHS
Kitchen base	24″	**34.5″** (so a 1.5″ top lands at 36″)	3″ increments, 9″ → 42″
Base, ADA	24″	**32.5″** (34″ overall)	same
Wall	13″	24 / 30 / **36** / 42″	12 / 15 / 18″ single door · 24 / 30 / 36″ double
Tall	24″	~96″	15 / 18 / 21″ single · 24 / 30 / 36″ double · 30 / 36″ oven & microwave
Bath base	**21″**	34.5″ or 32.5″ ADA	3″ increments

Source: our internal product-study notes, “Standard Dimensions we follow when designing cabinets”.

---

3 · The four Styles

The single most useful sentence you own: *”Same box. Same motion. Different skin. The carcass is identical across all four Styles — same frameless ¾" plywood, same DTC soft-close hinge, and the same slide for a given box depth. What changes is the door surface and the finish family. So you can move up or down without giving up the cabinet.”*

	POSITIONING	DOORS	HINGES	SLIDES
Essential	“The widest palette, at the working price.” Rentals, spec homes, hardworking family spaces	Woodgrain & solid TFL	**DTC** soft-close	**DTC undermount** on 21″ / 24″ boxes · **KV 8450FM** on other depths
Signature	“European decors, in the balanced middle.” Warm kitchens, dens	European TFL, deep textures	**DTC** soft-close	**DTC undermount** on 21″ / 24″ boxes · **KV 8450FM** on other depths
Reserve	“Soft-touch surfaces, handleless lines.” Modern builds	Super-matte, soft-touch, high gloss	**DTC** soft-close	**DTC undermount** on 21″ / 24″ boxes · **KV 8450FM** on other depths
Atelier	“Lacquered panels and statement builds.” Flagship kitchens, hospitality	Lacquered high gloss & perfect matt	**DTC** soft-close	**DTC undermount** on 21″ / 24″ boxes · **KV 8450FM** on other depths

The hardware is the same in every Style — say so. It is not a hedge, it is the argument: a rental spec and a flagship kitchen close on the identical mechanism. Nobody buys a worse cabinet here, they buy a different-looking one.

The standard palette — ruled 2026-10-23

The four series are **Styles**. A Style sets the door surface family, the opening and hardware options, the customisation level and the accessory programme, and it carries **five standard colours**. Colours may overlap between Styles. The collection names on the old showroom board (“A Touch of Nature”, “A Touch of Nature Plus”, “Soft Touch Matte”, “Artisan’s Shine”) are retired; the full library stays available on request.

STYLE	STANDARD COLOURS (FIVE)	SURFACE
Essential	White (Arauco Prism W100) · Black (Arauco Prism BLK100) · Acacia Honey (Karisma L591) · Rock Solid (Karisma L831) · First Class (Karisma L583)	Woodgrain and solid TFL
Signature	Stone Green (Egger U665 ST9, the coffee-bar green) · Misty Blue (Egger U502 ST9, the mudroom blue) · Soft Beige, the off-white (Egger U220 ST9) · Warmia Walnut (Egger H1307 ST19) · Sand Casella Oak (Egger H1388)	European TFL, smooth matte solids and deep-texture woodgrains
Reserve	Soft-touch White (AGT 734) · Soft-touch Black (AGT 723) · Cream, the off-white (AGT 730) · Stone Grey (AGT 728) · Relax Green (AGT 735)	Super-matte soft-touch
Atelier	Carte Blanche gloss white (Lummia HG115) · Gloss Black (Lummia HG203) · Vanilla Orchid perfect-matt off-white (Lummia PM100) · Midnight Sun perfect-matt black (Lummia PM765) · Steel Blue (Lummia PM778)	Lacquered high gloss and perfect matt
Closets (Everyday, Wardrobe)	White · **Grey Linen** · Black · Sweet Maple · Silk Road Walnut (the full 12-finish closet list on request; Dressing Room draws on the cabinet library)	Particleboard-cored closet panel

The matte set Damian named — white, black, the coffee-bar green, the mudroom blue and off-white — lives in Signature (Egger ST9 smooth matte); Reserve carries the soft-touch versions. Say: *”Twenty standard colours, five in each Style, and a much deeper library if you’re matching something.”* Egger U502 Misty Blue and H1307 Warmia Walnut are stocked project colours not yet in the 142-decor library file; the spec of record carries them in the palette block until the library is updated.

Closets: Everyday → Wardrobe → Dressing Room. Same ladder logic, built to cabinet standards in the same plant — but **not the same board.** See the closet-material rows below.

QUESTION	WHAT YOU SAY	STATUS
What is a closet made of?	**”Most of the closet system is particleboard-cored panel — the same core as our door panels. Some components are MDF.”** Say it plainly; it is normal for closet systems	**RULED** — Damian, 2026-08-06
Can I have a plywood closet?	**”Yes — we custom-laminate plywood for that. It costs more and it adds lead time, so let’s price it both ways.”**	**RULED** — Damian, 2026-08-06
Is it the same as your kitchens?	**”Same plant, same standards, same hardware — different board.”** The kitchen *box* is ¾″ plywood; the closet system is not. never say a closet box is plywood unless that job was specified that way	**RULED** — Damian, 2026-08-06

QUESTION	WHAT YOU SAY	STATUS
What hardware?	**”DTC soft-close hinges on every door. Drawers ride a DTC concealed undermount slide on 21″ and 24″ deep boxes — the kitchen and vanity bases — and a Knape & Vogt 8450FM side-mount on other depths. The same on every Style.”** Our partners are Häfele, Würth, DTC and Knape & Vogt.	**RULED** — Damian, 2026-10-23 (slides by box depth); 2026-08-06 (no hardware ladder)
Do the better lines get better hardware?	**”No — and that’s the point. Every Style gets the same hinge, and the same slide for a given box depth.”** Do not offer a hardware upgrade; there isn’t one to sell.	**RULED** — Damian, 2026-08-06
Anything special about the hinge?	**”It’s six-way adjustable — height, depth and side-to-side, both leaves. Your installer can true a door up on the wall without pulling it off the box.”** Say this to every builder and every contractor; it is the one spec they feel on site.	**PROVISIONAL** — DTC’s own product language; attach the frameless part number’s spec sheet to confirm
How good are the slides?	“Soft-close on every drawer. On the 21″ and 24″ boxes the undermount is concealed under the drawer; the KV on other depths is full-extension, hundred-pound ball-bearing.” Never “made in USA” about the KV.	**RULED** — KV 8450FM is the one documented rating; add the DTC undermount rating from its spec sheet
How many finishes?	**”Twenty standard colours — five in each Style — and a much deeper library if you’re matching something.”** If they want a specific colour: “tell me what you’re matching and I’ll check it.”	**RULED** — Damian, 2026-10-23: the standard palette above; the full library (142 decors plus stocked project colours) on request. “Over thirty” is retired
What finish types?	“Melamine, laminate, acrylic, paint and RTF.”	**RULED** — study doc
Hardware finishes?	“Brushed nickel, polished chrome, matte black.”	**RULED**
Can you match a colour we’ve specified?	“Send it to me. We carry a deep stock library, and we can source outside it — that adds cost and time, so let’s price both.”	**RULED** — study doc

4 · Process and timing

QUESTION	WHAT YOU SAY	STATUS	SOURCE
How long does it take?	**”Once the order is finalised, production runs in as little as two weeks, depending on finish and scale. Your quote carries the committed date — I won’t guess at it.”**	**RULED**	The only approved hedge (Booklet p3/p7/p23). Seven conflicting figures exist and the contracts disclaim deadlines
What if they push for a date?	“I’d rather give you a date I can hold than one that sounds good today. Let me confirm the schedule against your finish and come back to you.”	**RULED**	—
What’s the process?	“Consult, measure, 3D design, you approve, we build, we deliver. Six steps, and you see a rendering before anything is cut.”	**RULED**	Design Agreement §1–5
Do you do the measuring?	“Yes — I come out and field-measure. Or if you’d rather measure yourself, we have a guide and we’ll work from your numbers.”	**RULED**	`MEASURE YOUR SPACE`
What does design cost?	**”$250 covers me coming out to measure plus two designs. If you give me your own measurements, it’s $100. Either way it’s credited back against your order when you go ahead.”**	**PROVISIONAL** — expires Sept 1	Dec 2025 SOP. Two other fee schedules exist in older documents ⚠️ §11 item 2
Do I get the drawings?	“Yes. Layouts and elevations with exact sizes, plumbing and electrical notes, and appliance model numbers — your framer, plumber and electrician all work off them.”	**RULED**	Design Agreement §3
Who’s responsible if a measurement is wrong?	“If we measure, that’s on us. If you give us the numbers, they’re yours to stand behind — which is exactly why I’d rather come out.”	**RULED**	Design Agreement §15
Flat-pack or assembled?	“Your choice. Flat-packed ships tighter and costs less; assembled is faster on site.”	**RULED**	Booklet p7
What does assembly cost?	“$30 per base or wall cabinet, $60 per tall cabinet.”	**RULED**	Study doc
Do you install?	**”Every panel is QR-tagged — your installer scans it with** InstallAssistant**, our free app, and it shows a 3D model of exactly where that piece goes. If you want it installed, we arrange our partner contractors inside Greater Houston and quote that separately — ask me for a detailed install quote with the job.”** Search the **App Store for “InstallAssistant”** — it is free	**RULED** — Damian, 2026-10-23	Both contracts: YuDeZign itself performs no installation; partner contractors do, inside Greater Houston, on a separate detailed quote (install-quote procedure of 2026-10-15)
But can you get it installed?	“Yes — inside Greater Houston, through our partner contractors. I’ll request a detailed install quote with the job. Outside Greater Houston it’s your own installer, with our install support.”	**RULED** — Damian, 2026-10-23	Partner contractors, Greater Houston only, always a separate detailed quote
What about delivery?	“$350 a trip inside the Greater Houston area. A kitchen, a couple of vanities and a small closet generally ride together.”	**RULED**	Study doc
Can we pick up?	“Yes — the plant is 5802 Colfax Street, Houston. By appointment, and bring your order number.”	**RULED**	Study doc

5 · Money

QUESTION	WHAT YOU SAY	STATUS
What deposit do you take?	**”Terms are set in your written agreement, and I’ll walk you through them line by line before you sign anything. I don’t want to quote you a number and have the paperwork say something different.”**	**BLOCKED** — five conflicting figures. Flag it to the office
What does it cost, roughly?	**Price it per linear foot** from the table below. Say the range, not a point number: *”a kitchen like that runs somewhere around four to seven and a half thousand in cabinets, depending on finish. Let me measure and get you a real number.”*	**RULED** — Damian, 2026-08-06
Can I get trade pricing?	“Yes — we run trade pricing. It’s set per account, so let me open one for you.” Then get the New Account Registration form filled.	**RULED**
What tier am I on / what’s my discount?	“Trade pricing is set per account — let me get an account opened for you and come back with your numbers.” **Never name a tier, a percentage or a multiplier.**	**RULED**
Are these prices retail or contractor?	“The sheets I share with trade accounts are contractor pricing.”	**RULED** — study doc
What does the material cost you?	Don’t answer. “What I can do is show you where the money actually goes in a cabinet — that’s a more useful conversation.”	**RULED**
Can you beat this quote?	“Send it to me and let’s compare like for like — box material, drawer count, slide rating, soft-close. Half the time the gap isn’t price, it’s specification.”	**RULED**
Do you take cards?	“Yes. There’s a card processing fee — it’s on your agreement.”	**RULED**

Ballpark pricing — per linear foot

This is the number you give in the room. It is a ballpark, and you say so every time.

ROOM	SEMI-CUSTOM	CUSTOM
Kitchen	**$215** / LF	**$375** / LF
Garage	$215 / LF	$375 / LF
Home office	$190 / LF	$340 / LF
Closet	$165 / LF	$315 / LF
Bathroom	$130 / LF	$225 / LF

Across everything: **$130–$215 semi-custom, $225–$375 custom.**

TYPICAL JOB	LF	SEMI-CUSTOM	CUSTOM
Kitchen, typical 10×12	20	$4,300	$7,500
Kitchen, large	30	$6,450	$11,250
Single vanity	5	$650	$1,125
Double vanity	8	$1,040	$1,800
Reach-in closet	8	$1,320	$2,520
Walk-in closet	15	$2,475	$4,725
Garage wall	20	$4,300	$7,500

The four conditions on every one of these numbers. Say them, don't skip them.

Supply only	Cabinets. Not countertops, not appliances, not labour
Assembled	These rates are for assembled cabinets
Delivery and installation are extra	Delivery $350 a trip. We provide install support, not installation — price that separately
Finish and add-ons move it	A gloss lacquer door and a shelf of organisers are not the same job as a woodgrain slab

QUESTION	WHAT YOU SAY	STATUS
Can you ballpark it?	**Measure the run, multiply, give the range.** *"Around twenty feet of cabinetry — so roughly $4,300 in semi-custom, closer to $7,500 if you go custom. Supply only, assembled, before delivery. Finish moves it."*	**RULED** — Damian, 2026-08-06
Is that the price?	**"No — it's a ballpark so you know whether we're in the same conversation. Give me twenty minutes of measurements and you'll get a real number, itemised."**	**RULED**
What's the difference between semi-custom and custom?	**Deflect for now.** *"Depends on the door, the finish family and how much of it is made to your sizes — let me show you what each looks like."* **Do not map it to a line name** until it's ruled	**BLOCKED** — the four lines and the semi/custom split have not been reconciled. See §11
Bathroom, custom rate	$225/LF is **derived**, not confirmed. Usable as a ballpark; flag it if a bathroom-only custom job gets serious	**PROVISIONAL** — expires with the next price review
Can I write this on a quote?	**No.** Ballparks are spoken, in person. A number in writing is a quote and comes from the quote team	**RULED**

6 · Quoting — your contract with the quote team

Four lines. They are also printed on your field card.

1. **Submit a complete packet.** A filled Discovery Sheet is the packet. Incomplete packets get bounced, and bounces are measured.
2. **You receive a versioned quote.** `QUO-2026-####`, with a version.
3. **You present that version.** Never a number from memory, never a number you adjusted in the truck.
4. **You never show what anything costs us** — not materials, not tiers, not any internal sheet.

QUESTION	WHAT YOU SAY
Can you ballpark it right now?	“I can tell you the shape of it — a kitchen this size usually lands in a range. But I’ll have a real number for you with the drawings, and that’s the one you can build a budget on.”
Can you take 10% off?	“Let me look at what’s driving the number first. There’s usually a smarter answer than shaving the box.” Then route it through the office. **Discount authority sits with management, not with you — and that is deliberate.**

7 · Warranty and liability

QUESTION	WHAT YOU SAY	STATUS
What’s the warranty?	**”Your written warranty comes with your agreement — I’ll send you the current sheet so you’re reading the real thing, not my summary.”**	**BLOCKED — highest priority.** Three lengths exist, and the *newest* contract contradicts our flyers. Do not state a length to anyone
Is it transferable to my buyer?	“That’s exactly the kind of detail I’d rather give you in writing than guess at. Let me send you the current sheet.”	**BLOCKED**
Does it cover a rental / commercial job?	Same deflection.	**BLOCKED** — residential-use language exists in the warranty documents
What if something arrives damaged?	“Inspect on delivery and note it on the packing slip. Anything you find later, email orders@yudezign.com — there’s a claim window and I’ll walk you through it.”	**RULED**

8 · Who we are

QUESTION	WHAT YOU SAY	STATUS
Who is YuDeZign?	“We’re the manufacturer. We’ve been building cabinetry in Houston since 2007 — our own plant, our own machines, our own design software.”	**RULED** — 2020 catalog p21
Where are you? — two places, don’t mix them up	**The plant is 5802 Colfax St, Houston** — that’s where cabinets are made and where customers collect. **The showroom is 13230 Murphy Rd, Ste 600, Stafford** — that’s where you take a customer to see and touch.	**RULED** — 2026 brochure ⚠️ §11 item 3
How far do you deliver?	“Greater Houston. Practically, if you’re inside about ninety minutes of the plant, we’re a good fit.”	**RULED**
What’s UFS / Yukon / Voxaura?	“Same group. UFS does flooring and building materials, Voxaura does lighting, we do cabinets and closets. If it’s useful you can run one relationship instead of three.”	**RULED**
Whose booth is this?	**BLOCKED — see §11 item 4.** Until ruled: *”We’re all one group — I’m on the cabinetry side.”*	**BLOCKED**
Are you made in the USA?	“Made in Houston. That’s the whole point — no ocean freight, no port delays, and no distributor between you and the shop that builds your cabinets.”	**RULED** — Builder insert

9 · The three arguments you will actually have

Every line below is lifted from copy already approved and in print.

Against an import or an out-of-state supplier

> “No ocean freight, no port delays, no distributor between you and the shop that builds your cabinets. And when you need a replacement door in month eight, it comes from the same building.”

Against a big box

> “That’s a boxed-in showroom set. We’re made to measure — custom widths, custom modifications, over thirty finishes. Same conversation, different answer.”

Against another local shop

> “A trade partner, not just a supplier. One source for cabinets, closets and casework, consistent across every plan you run — and our pricing sheets are organised by finish so you can budget a whole plan fast, not one kitchen at a time.”

---

10 · Escalation

SITUATION	WHO	HOW FAST
Anything BLOCKED, in front of a customer	Deflect, then flag it to the office	Same day
Discount request	The office → management	Before you respond
Anything over 250 cabinets	Operations — **plant load check before you say a delivery date**	Before you commit
A claim, a damage report, a warranty question	orders@yudezign.com, copy the office	Same day
A question that isn’t in this document	Ask the office — and it gets added to this document	Same day

---

11 · Open items — the four things that are still wrong

These are tracked in `OPEN-QUESTIONS-FOR-ANDY.md` and logged in `90_MANAGER\CHANGE-LOG.md`.

1. **The expo banner — one line right, one line wrong. ”Frameless & framed” is fine.** It sits under a heading that reads *”What We Build,”* which is the only inaccuracy: we **build** frameless and we **stock** framed. If a customer points at the banner and asks for face-frame, **the answer is yes** — then you volunteer that the framed line is stock we carry, not something we machine. Tighten the heading before any reprint; do not treat the offering as an error. **The hardware line on the same banner IS wrong.** It prints a hinge brand we have never used alongside one we no longer use. We fit **DTC on every line**. If someone reads it back to you: *”that board is out of date — our hinge is DTC across the whole range, six-way adjustable.”* Do not defend that line and do not name the brands on it.
2. **Design fee** — $250/$100 (Dec 2025 SOP) vs $149/$99 (2020 agreement) vs $250/$150 + $75 a revision (a third document). Ruled PROVISIONAL at $250/$100 credited. **Check what the live website publishes**

— if `yudezign.com` says something different, the website wins in front of a customer and this ruling changes.

3. **Address** — the 2026 brochure says 13230 Murphy Rd Ste 600; other material says 13366 Murphy Road, and one brand labels that Stafford while another labels it Houston. Use the brochure address until ruled.
4. **Exhibitor identity** — the show folder lists *"YUKON (Flooring & Glass) · displays by YuDeZign"* while the banners lead with UFS. You need a one-sentence answer to *"so are you Yukon or YuDeZign?"* before the doors open.
5. **The June 2026 Builder Strategy deck is not a source.** It states hardware, finish count and a deposit figure that all contradict the 2026 spec of record. It is a strategy document, not a product document. **This Answer Key overrides it.**

---

12 · Rulings of 2026-10-23 — Styles, palette, slides, shaker, installation

Damian's review of the partner training video and guide, 2026-10-23. Each ruling is already applied in the sections above; this is the record.

RULING	WHAT CHANGED	WHERE IT LIVES NOW
The four series are Styles	Essential, Signature, Reserve and Atelier govern hardware and opening options, customisation and features, with some overlap on colour. "Core / Ridge" is retired	§3 heading and intro; `product-lines.json` `styles`
Standard palette: five colours per Style	The old 16-finish / 4-collection showroom board and its collection names are retired. Twenty standard cabinet colours plus a five-colour closet palette with Grey Linen; the full library on request	§3 palette table; `product-lines.json` `standard_palette` per Style
Slides by box depth	DTC concealed undermount slides on 21″ and 24″ deep boxes (kitchen and vanity bases); Knape & Vogt 8450FM side-mount on other depths. Same rule on every Style; still no hardware ladder	§3 table and hardware rows; `shared_platform.slides`
Custom shaker: costly, not recommended	A made-to-measure shaker is one piece of machined MDF in RTF, costs more than the slab and is not recommended. Shaker buyers usually belong on the stocked framed line: standard five-piece shaker doors on ½″ plywood boxes	§2 shaker row
Installation through partner contractors	Install support everywhere (QR-tagged panels, the InstallAssistant app). Installation itself is available through YuDeZign's partner contractors inside Greater Houston only, always on a separate detailed install quote requested with the job. Never "we install"	§1 never-say row; §4 install rows; `30_SOP\SALES-SOP.md` Stage 8

The website mirror (`api/_content/*.ts` , `src/data/finishStyles.ts` , `src/data/finishes.ts`) and the Line Guide and flyers are derived from this document and the spec of record; regenerate them from these rulings rather than editing them by hand.

Anything ruled here can change. When it does, the change is dated in `CHANGE-LOG.md` and this document's version number goes up. If your field card's footer version doesn't match this document's, your card is stale — get a new one.

Onboarding Curriculum

YuDeZign · Houston sales team · Aug 5 – Aug 10, 2026 · then weeks 3–6

You can already sell. What you don't have yet is the product, and the machine behind it. That's what this week is for.

It is compressed on purpose — the Houston Builders Expo opens **Tuesday Aug 11** and we are not going to stand at that booth guessing. Five taught days, an exam, and a gate you have to pass before you work the floor unsupervised.

Everything you need to memorise lives in `ANSWER-KEY.md`. This document is the schedule; that one is the truth.

> **Starting after August 2026?** Run days 1 to 4 as written over your first week, in order. Days 5 and 6 and the booth certification apply only when a show is on. Watch the two training videos (made-to-measure line, stocked framed line) before day 1. The Answer Key is at **v1.5 (2026-10-23)**: the four series are now *Styles* with five standard colours each, the slide is set by box depth, the custom shaker is not recommended, and installation runs through partner contractors inside Greater Houston. Where an older line in this schedule disagrees, the Answer Key wins.

The week

Wed Aug 5	4 hrs	Day 1 — The product
Thu Aug 6	4 hrs	Day 2 — The market and the message
Fri Aug 7	4 hrs	Day 3 — The journey and the machine
Sat Aug 8	6 hrs	Day 4 — Exam, drills, **Booth Certification**
Sun Aug 9	on site	Day 5 — Booth build at NRG + lead-card drill
Mon Aug 10	on site	Booth completion and final rehearsal, standing in the booth
Tue 11 – Wed 12	show	Houston Builders Expo

> **There is no weekend reading block — Sunday and Monday are booth setup.** The handbook is already written and in your hands, so reading happens **Wednesday, Thursday and Friday evenings, plus early Saturday**. That is roughly 15 pages a night. It is the one genuinely uncomfortable part of this schedule and there is no way around it: the show moved, not the workload.

Day 1 · Wednesday Aug 5 — The product

4 hours, trainer-led. Reads: the product-study document and the four line flyers.

1 · What we make, and what we don't. This is the half of the job most new cabinet reps get wrong, because they say yes to everything. We **manufacture frameless only** — flat-panel and shaker doors, no raised panel, no inset. We do **stock an RTA framed line** we buy in and resell, so "do you do framed?" is a yes — followed immediately by whose it is. **Build and sell are different verbs and you need both.** Knowing the edges of the catalogue is what lets you sell fast and never eat a change order.

2 · The box. ¾″ plywood carcass; ¼″ plywood backs and drawer bottoms; particleboard available if a customer needs cost out. Cam-and-dowel joinery. French cleat hanging. Why a 4×8 sheet is the reason no single cabinet goes over 96″ — that constraint comes up in real conversations more often than you'd think.

3 · Boards. Plywood vs particleboard vs MDF: what each is, where each belongs, and why MDF is the right core for a shaker door and the wrong one for a sink base.

4 · Finishes. Melamine, laminate, acrylic, paint, RTF. What each one *is*, physically, so you can answer "what's the difference?" without reaching for a brochure.

5 · The shaker disclosure. We machine shaker doors out of a single piece of MDF. We do not use solid wood. Some customers specifically want wood. **You volunteer this, every time, before they ask.** It is a custom door we don't recommend; shaker buyers usually belong on the stocked framed line. Said up front it's an engineering advantage — MDF doesn't move with humidity, so the door won't warp or split at the joint. Discovered later it's a credibility problem you don't recover from.

6 · Overlays. Full overlay on kitchens and vanities, half overlay on closets. Which hinge does what, and why half overlay lets two closet units share a panel.

7 · Standard dimensions. The table in `ANSWER-KEY.md` §2. Learn it. A rep who can lay out a kitchen in stock sizes on a napkin, in front of a customer, is worth three who have to go back to the office.

> **Homework:** sketch a 12-foot L-shaped kitchen using only stock sizes in 3″ increments. Name every box — base, wall, tall — with its width. Bring it Thursday.

Day 2 · Thursday Aug 6 — The market and the message

4 hours. Reads: `SALES-STRATEGY.md`, `ANSWER-KEY.md` *front to back, Builder Strategy deck pp. 3–16.*

1 · Who actually buys from us. Five live lanes, with real numbers attached — a ~$2,600 single vanity, a $31,880 custom home, and a live $325K quote for 54 townhome units, **quoted, not won.** You are not selling into a theory, and you are not claiming work we haven't done.

2 · Where we're pointing. Builders and developers 70%, remodel 20%, custom and luxury 10%. Apartment value-add first, build-to-rent second, production builders third. Why, and what that means for how you spend a Tuesday.

3 · The territory. Roughly ninety minutes' drive of the plant on Colfax St. Outside that, qualify hard before you spend a day on it.

4 · The four Styles. Essential, Signature, Reserve, Atelier, five standard colours each. And the sentence that does most of the work: *the box and the hardware are identical across all four — what changes is the door surface and the finish family.* That is how you move a customer up or down without them feeling downgraded.

5 · The Answer Key, read out loud. All of it. The never-say list gets read aloud, by you, not by the trainer. It sticks differently when you say it.

6 · The three arguments. Against an import. Against a big box. Against another local shop. The lines are already written and already approved — you're learning them, not inventing them.

> **Homework:** twenty flashcards — every never-say item on one side, the exact thing you say instead on the other. And write your own 30-second pitch for two different segments. Your words, our facts.

Day 3 · Friday Aug 7 — The journey and the machine

4 hours. Reads: `SALES-SOP.md`, `KPI-AND-GOALS.md`, *the measuring guide.*

1 · Nine stages. Target → Qualify → Scope & measure → Design & estimate → Present → Close → Produce → Deliver → Retain. Who owns each one and where it hands off.

2 · The system's vocabulary. Outreach, Leads, Estimates, Sales Projects, Factory Projects. `CLT-####`, `EST-####`, `QUO-2026-####`, `SP-####`. Statuses: Lead, Quoted, Sold, In Production, Installed, Closed. **We use the system's words, not our own.** Two vocabularies is how a pipeline becomes fiction.

3 · Live walk-through. Open a client. Open an estimate. Move a status. Attach a document. Then do it yourself while the trainer watches.

4 · The quote request. What a complete packet contains, and why an incomplete one gets bounced back at you. The Discovery Sheet is built so that a filled sheet *is* the packet — you never write the same information twice.

5 · Measure prep — not measuring. This week you learn what to photograph, what to ask, and what goes in the truck. **You do not measure a customer's kitchen unsupervised until you're certified in week 3.** A wrong measurement is the most expensive mistake available to you, and it is worth two more weeks to avoid it.

6 · How you're measured. Every KPI, and exactly where each one is captured. Nothing is scored off a number you can't see.

> **Homework:** pair up. Fill a Discovery Sheet on each other's imaginary project. Open two practice client records and run both through to *Quoted*.

Evenings, Wed–Fri — Reading

The pack is already written and already in your hands. **Every video and link is in `STUDY-LINKS.md`, grouped by the day it supports** — including which two videos show methods we deliberately don't use, and why that's worth knowing. Split it across three nights:

Wed night	Answer Key, cover to cover. This is the one that matters most
Thu night	Sales Strategy + What To Say. The **ten explainer videos** in the product-study doc — framed vs frameless, hinge types, plywood vs particleboard vs MDF, melamine and laminate, acrylic vs laminate, RTF, how shaker is normally made, edge banding
Fri night	Sales SOP + KPIs + Booth Playbook. Then the **Builder** and **Contractor** editions of the 2026 booklet — those are the words the company already uses, so borrow them

> **Homework, due Saturday 8am:** ten objections, answered in your own words. Not the script — yours. We'll pressure-test them Saturday.

Day 4 · Saturday Aug 8 — Certification

6 hours. `EXAM-AND-DRILLS.md` *holds the papers.*

09:00	Written exam. 40 questions, 1 hour, closed book
10:15	30-second pitch, to camera, until clean **twice in a row with no notes**
11:30	Eight objection roleplays. The trainer plays the customer and does not go easy
13:30	**Three live cold calls** off the call list, with the trainer listening
15:00	Discovery Sheet under time pressure
16:00	Debrief, grades, booth assignments

Grading

COMPONENT	WEIGHT
Attendance	10%
Homework (Days 1–3 + the evening reading)	20%
Written exam	30%
Live drills — pitch 10 · objections 10 · cold calls 10 · discovery 10	40%

Structure borrowed from the designer curriculum we already run, reweighted: a designer is graded on recall, a salesperson on performance.

Booth Certification — separate, and binary

This is **not** on the curve and there is no partial credit.

1. **100% on the never-say section of the exam.** Every question, correct.
2. **The 30-second pitch delivered clean, twice, from memory.**

Fail either and you don't work the booth unsupervised. That isn't about training standards — warranty and deposit are the two questions where an improvised answer costs real money, and a trade show floor is the single worst place to improvise one.

Day 5 · Sunday Aug 9 — NRG, booth build

On site, alongside the build crew.

Walk the stand and find where you'll actually stand. Lead-card drill — capture ten fake leads off each other in fifteen minutes, timed. The point isn't speed for its own sake: the card gets written **the moment the visitor walks away**, while you still have the conversation in your head, not at the end of the day from memory. Set up

the HOT and REST boxes. Shift plan and role swaps. Packing check against `BOOTH-KIT.md`. Then read `BOOTH-PLAYBOOK.md` standing in the booth, not sitting in the office.

Monday Aug 10 — booth completion and final rehearsal

On site.

Finish the stand. Then rehearse **out loud, in the booth, at the volume a hall actually needs** — your office voice does not survive an exhibition floor. Run the opener and all four pitch variants on each other. Any Saturday re-test happens today; nobody works the floor uncertified.

Last checks: booklets sorted into four labelled stacks by edition, cards and pens on the counter, finish boards where a visitor can reach them, QR sign readable from the aisle.

After the show — weeks 3 to 6

The compressed week gets you to the booth. It does not make you finished.

WEEK	MODULE	GATE
W3 · Aug 17–21	**Measure certification.** Two supervised site measures, then one solo — checked against a supervised re-measure. Quote-request quality: your first-pass acceptance rate. CRM hygiene audit on everything you've entered.	**Required before any solo measure appointment**
W4 · Aug 24–28	Bulk work. The apartment value-add playbook, build-to-rent, production single-family. Reading a unit mix. Estimating at volume without burning design hours. Group cross-sell — the $55K medical building job as the worked example.	Present one real bulk opportunity
W5 · September	Closets and vanities as their own sale, not an add-on. Half overlay. The three closet lines. Why the margin is in the organisers, not the box. Dealer and commercial lanes.	Quote one closet end to end
W6 · September	Contracts, change orders, negotiation, terms. Handling a price-down request without discounting the box. Post-award service and the 30-day check-in.	**Full certification. Quota goes live Oct 1**

What we're not teaching you, and why

Competitor battlecards. We don't have real competitive intelligence, and inventing it is worse than having none — you'd repeat it and it would be wrong. So instead: when a customer names a competitor, ask *"what do you like about working with them?"* and **write the answer down.** In six weeks you two will have built the first honest competitive picture this company has ever had.

A full customer FAQ. You'll get twelve questions on the back of the field card. The real FAQ gets written in week 3, from the questions you actually get asked at NRG — which will be a far better document than anything we could guess at this week.

All 142 finishes. Learn four line names and one sentence each. The rest is a lookup.

Study Links

Everything to watch, read and bookmark, in the order the curriculum needs it. Ten short videos, two shared Drive folders and three live pages.

> **Read this before you watch anything.** These videos are **third-party explainers**, chosen because they show a concept clearly — not because they show how we work. Several of them demonstrate methods we deliberately don't use. Where that's true it's flagged, and the flag is the most useful part: *knowing what we don't do is half of knowing what we do.*

Day 1 · The product

Frameless vs framed — start here

Cabinets: Framed, Frameless & Inset — What's the Difference? · `https://youtu.be/F8x5c-6seYo` The single most useful ten minutes in this list. Explains the face frame, why it exists, and what removing it changes. → **We build frameless only — though we do stock an RTA framed line we resell.** Framed and inset are shown so you can recognise them when a customer or designer specifies one — and say no clearly.

Hinges and overlay

What Cabinet Hinge Do I Need — Part 1: Face-Frame vs Frameless · `https://youtu.be/unyx9G_mqlw` Why the two constructions need different hinges. Watch for how the hinge mounts to the *side panel* on a frameless box — that's ours.

What Hinge to Use — Part 2: Hinge and Base Plate Combinations · `https://youtu.be/NdTHHGUww0A` How the hinge and plate together produce full overlay, half overlay or inset. → **We use full overlay on kitchens and vanities, half overlay on closets.** Half overlay is what lets two closet units share one panel. Inset we don't do at all.

The box

How to Assemble Frameless Base Cabinets · `https://youtu.be/7jYdWrWUaIQ` What a customer is actually holding when they take a flat-pack delivery. → Another company's cabinets, so the hardware differs — **ours ship with QR-tagged panels and the** InstallAssistant** app (below), which is a genuine selling point against exactly this experience.

Sheet goods

Particle Board vs MDF vs Plywood · `https://youtu.be/xPyLWKz0Pas` The three materials, side by side. → Map it onto us as you watch: **plywood → the box · particleboard → door cores, or a cheaper box on request · MDF → door cores, especially shaker.**

Day 1 continued · Finishes

Melamine vs Laminate · `https://youtu.be/8nnCOPXEowg` The distinction customers ask about most and reps get wrong most. Laminate is many resin-soaked layers bonded to a substrate — thicker, tougher, sold as its own sheet. Melamine is a single resin-soaked paper fused to the core — thinner, needs specialist machinery.

Acrylic vs Laminate — which is better for kitchen cabinets? · `https://youtu.be/1UV1B2E1MaQ` Where high gloss belongs and where it doesn't.

How Thermofoil (RTF / 3DL) Doors Are Made · `https://youtu.be/nzD_TW3tC_Q` Vinyl film vacuum-pressed over MDF. This is how our **shaker** doors get their finish.

How to Finish Plywood Edges with Edge Banding · `https://youtu.be/XCKaKX86gYE` Why every exposed edge gets banded: it seals the core against moisture, and colour-matched it makes the panel read as one piece. Two sentences you will use constantly.

⚠️ The one that shows what we *don't* do

Build Shaker Cabinet Doors With a Table Saw · `https://youtu.be/OdImx4h0MWo` This is **rail-and-stile** shaker — five pieces of solid wood, with the centre panel left floating so it can expand and contract with humidity. It is the traditional method and it is **not ours.**

We machine a shaker profile out of a single piece of MDF. MDF doesn't move with humidity, so the door can't warp or split at a joint, and it takes paint better than wood. That's a real engineering argument — but only if you make it *before* the customer discovers it themselves.

Watch this video specifically so you can say: *"the traditional way is five pieces of wood with a floating panel. We machine ours from one piece of MDF instead, and here's why that's better for you."* That sentence handles the objection in full.

Day 2 · What we send customers

Brochures and guides `https://www.yudezign.com/downloads` Customer-facing and safe to send — the 2026 booklet, four companion guides, the cabinet and closet flyers, and the finishes catalog. **Send the edition that matches the buyer** — Builder, Contractor, Home or Commercial — rather than everything. It is a public page, so you can send the link itself rather than attaching files.

Price lists — coming to the sales portal shortly. Until they are posted, **ask the office** for a current sheet. Do not work from a copy you were sent previously: there are price sheets in this business years apart that disagree by a third to a half on the same cabinet. The **New Account Registration form** — how a prospect becomes an account — also comes from the office for now.

> Sharing a price list is not the same as quoting a job. A price list lets a contractor budget. A **job** gets a versioned quote from the quote team, off a Discovery Sheet. Never build a job price off the sheet yourself.

Bookmark these three

InstallAssistant — our app, free on iOS `https://apps.apple.com/us/app/installassistant/id6743378316`	Every panel carries a QR sticker; scanning it shows a 3D model of the whole cabinet and exactly where that piece goes. **Install it on your own phone before the show.** It demos in fifteen seconds and answers “how hard is this to put together?” better than any sentence you could say
yudezign.com/finishes	The public finish library, and where the booth QR points
The sales portal `https://www.yudezign.com/sales`	Where the documents live. The lesson guide, the training deck, brochures and — shortly — the price lists. **The posted copy is the one that gets updated when a ruling changes**, so work from the portal rather than from a file somebody emailed you

What to read, and in what order

WHEN	READ
Wed night	`ANSWER-KEY` — cover to cover. The one that matters most
Thu night	`SALES-STRATEGY` + `WHAT-TO-SAY`, then the Day 1 videos above
Fri night	`SALES-SOP` + `KPI-AND-GOALS` + `BOOTH-PLAYBOOK`, then the **Builder** and **Contractor** booklet editions
Reference, not reading	The finishes catalog · the four line flyers (Essential, Signature, Reserve, Atelier) · the closets flyer

Don’t try to memorise the finishes catalog. Learn the four line names and one sentence each. The 142 décors are a lookup, and the answer to “do you have X?” is *”let me check the library and come back to you”* — which is correct, fast, and gives you a reason to call.

A note on third-party videos

None of these are ours, so none carry our specs. If a video contradicts the Answer Key, **the Answer Key wins** — it is traced to our own documents and these are traced to somebody’s YouTube channel.

Use the videos to understand *how cabinetry works*. Use the Answer Key to say *what we sell*.

Sales Strategy

YuDeZign · Houston · August – December 2026

1 · What we are

YuDeZign is a **manufacturer**, not a dealer. We run our own plant on Colfax Street in Houston, our own machines, our own design software. We have been building cabinetry since 2007.

That single fact is the strategy. Almost everyone you compete against is reselling somebody else's box — imported, warehoused, marked up, and three weeks from a replacement door. You are selling *the shop itself*. Everything below is an application of that.

The line that carries it:

> "No ocean freight, no port delays, no distributor between you and the shop that builds your cabinets."

2 · Who we sell to today

Not a theory. Five live lanes, with real numbers behind them.

LANE	WHO	TYPICAL SIZE	NOTES
Cabinet dealers / resellers	trade accounts across Houston	recurring	Steady repeat volume. B2B — they resell to their own customers
Builders & developers	Texas Gold, Rountree, Galloway, Westin, SGA	$27K–$32K a home	Where the growth is
Designers, remodelers, GCs	the long tail	$5K–$15K	Volume of relationships, smaller tickets
Homeowners direct	showroom and referral	$3K–$10K	Closets, vanities, one-off kitchens
Commercial	medical, hospitality, townhomes	$14K–$43K	Voss Medical $14.3K · Internal Medicine Bldg 7 $43K cabinetry

Anchors worth carrying in your head:

- A single custom home — 2028 Pebble Bend, 62 cabinets — was **$31,880**.
- A closet package for a contractor was **~$22,800**.
- The largest opportunity we have quoted — 54 townhome units, 1,188 cabinets — came to **~$325,000**. **It is not won.** It is still open, and you must never present it as a completed project.

That last one is a **scale anchor, not a reference.** It tells you what a single multi-family win is worth — bigger than an entire quarter of everything else on this list — which is why the strategy points where it does, and why you don't get judged on a month where no whale lands.

> **Say the first two out loud, never the third.** Pebble Bend and the closet package are delivered work. The 54-unit job is a live quote. Citing an unwon job as a reference is the fastest way to lose a deal you were winning — buyers check.

---

3 · Where we're pointing

Target mix: builders and developers 70% · remodel 20% · custom and luxury 10%.

That is a deliberate move away from where the revenue has historically come from. Custom homeowners are pleasant, profitable and *slow* — one kitchen, one relationship, one order. A builder is one relationship and forty kitchens.

The five bulk categories, ranked

	CATEGORY	VALUE PER WIN	WHY THIS RANK
1	**Apartment value-add renovation**	$250K–$600K per complex	**Start here.** Owner is renovating occupied units, wants consistency and schedule, doesn't need custom
2	**Build-to-rent communities**	$400K–$1M	Houston is a top-5 US BTR market, ~3,000 units under construction
3	**New-home builders & master-planned**	$250K–$800K/yr	The most volume. Houston is the #1 US metro for master-planned communities; 75,786 permitted units in 2025
4	**Custom & luxury + designers**	$12K–$25K a home	Highest margin, lowest volume. Worth keeping, not worth chasing
5	**Student housing**	$1M+	A cultivated whale. Long cycle. Don't build a month around it

Deliberately skipped: brand-new apartment construction. The general contractors are national, the specs are locked years out, and we would be a line item to a purchasing department that has never heard of us.

The territory

Roughly ninety minutes' drive of the plant — 5802 Colfax St, Houston. Delivery is $350 a trip inside Greater Houston, and a job outside the radius quietly eats its own margin in freight and site visits. Outside 90 minutes, qualify hard before you spend a day on it — and raise it with the office before you commit.

---

4 · What each buyer actually cares about

You will lose deals by pitching the wrong thing to the right person.

	WHAT THEY CARE ABOUT	WHAT TO LEAD WITH	WHAT THEY DON'T CARE ABOUT
Apartment owner / asset manager	Cost per unit, schedule certainty, consistency across 200 doors, minimum disruption to occupied units	"We can hold one spec across every unit and phase deliveries to your turn schedule."	Finishes. Design. Renderings
Builder / developer	Price per plan, spec consistency, no surprises, a supplier who doesn't blow a closing date	"One local source from your model home to your final phase, with volume pricing."	Bespoke anything
GC / remodeler	Speed, responsiveness, not being left holding a problem	"Replacement parts and doors come from the same building, and you'll have my phone number."	Corporate story
Designer	That it looks right, and that you make her look good to her client	"Twenty standard colours, a deeper library, made to measure, and lifelike 3D your client can sign off on."	Freight logistics
Homeowner	Trust, and not being ripped off	"Come see the plant. We build it here."	Volume pricing
Dealer	Margin, lead time, ease of reorder	"Pricing sheets organised by finish, so you can price a job in minutes."	Our brand story
Commercial	Compliance, phasing, documentation	"ADA-compliant casework, phased rollout, drawings your trades can build from."	Anything residential

5 · The constraint you must respect

The plant runs about 500 cabinets a month for standard, replicable work — 25 a day over 20 days. Far fewer as customisation goes up.

Put that against the targets: **$100K a month is roughly 300 to 405 cabinets** depending on mix. That is **60–80% of the entire plant**, and the plant also has to feed our existing accounts and commercial work that has nothing to do with you.

Two rules follow, and they are not negotiable:

1. **Anything over 250 cabinets gets a plant-load check before you say a delivery date out loud.** Not after the quote. Before the sentence.
2. **A 54-unit job is one and a half to two months of the entire plant.** Winning one is a company-level event, not a personal one. Raise it the moment it looks real, not when it closes.

Selling more than we can build is worse than selling nothing. It costs the relationship *and* the next three.

6 · Where your leads come from

SOURCE	WHAT'S THERE	STATE
Houston Builders Expo, Aug 11–12	6–10K pre-registered buyers; 85% with purchasing power. **Target 75 leads, 100 in a good show**	**Your single biggest input this year**
GHBA member list	914 companies — 396 custom-home builders, 223 remodelers, 192 single-family, 50 GCs, 42 multi-family, 8 build-to-rent	Loaded into `Call-List-HOU-2026.xlsx`
Houston remodelers & contractors	~1,160 companies with verified emails	Available
Apartment owners	**Nothing existed. We built `Apartment-Owner-Targets.xlsx`**	See below
Existing group accounts	~775 UFS dealer accounts; 278 Houston accounts with a rep already assigned	Cross-sell — see §7
The showroom	13230 Murphy Rd, opening August	Walk-ins

Read the GHBA numbers again. The list we can dial tomorrow is 396 custom-home builders and only 8 build-to-rent — the exact inverse of the priority order in §3. That is a real problem and you should know about it rather than discover it in October.

Two consequences: **(a)** Aug–September outbound will be custom and remodel-heavy, and that's fine — those are real customers and they pay. **(b)** the apartment-owner list is the highest-value prospecting work available, which is why it got built rather than assumed.

---

7 · The cross-sell

Every company in the group is a way into an account for the others.

- Their commercial job → we add cabinets and casework.
- Our builder → we bring flooring, lighting, the full interior package.

The proof: Internal Medicine Building 7 was $42,999 of YuDeZign cabinetry *plus* $11,983 of UFS — about **$55K on one relationship.**

Voxaura lighting is a genuine second product, not an accessory: 24V, cut-to-length, tunable white, app and Matter control, UL-listed drivers. It sells on its own design and its own packaged solution. If a customer is doing closets or a display kitchen, lighting is a natural second conversation — and it's a second order on the same trip.

---

8 · The six months, in one paragraph

August is train, exhibit, and triage — you will not book much and that is expected. September you turn the engine on and the show leads convert. **October is the month that matters: land at least one signed builder or multi-family award.** November you prove it repeats — the second order from an August customer is worth more strategically than the first one from anybody. December you close, you collect, and you build the 2027 list.

Numbers are in `KPI-AND-GOALS.md`.

---

9 · Three things we are not doing

We are not discounting to win. You have no discount authority for the first 90 days. Every request routes through the office. A rep who wins on price teaches the market what we're worth.

We are not promising dates we can't hold. See the never-say list. Half of this industry's reputation problems are lead times somebody invented to close a deal on a Friday.

We are not chasing everything. Outside the 90-minute radius, outside the five categories, or under about $3,000 — qualify it hard. Your time is the scarce resource, not our capacity to quote.

What To Say

YuDeZign · Houston sales team · companion to `ANSWER-KEY.md`

Every claim in this document is lifted from copy that is already approved and already in print. You are not inventing a pitch. You are learning one.

---

1 · The opener

Not a pitch. A question — because it routes the conversation in four seconds instead of forty.

> **”Are you building or renovating right now?”**

At the booth, that’s it. Whatever they answer tells you which of the four pitches below to use. If they say “just looking,” you have a flyer and a friendly exit, and you’ve spent eight seconds.

---

2 · The thirty seconds

The default — use this when you don’t know who you’re talking to yet:

> “We’re YuDeZign — we manufacture frameless cabinets and closets right here in Houston, in our own plant. Three-quarter-inch plywood, soft-close standard, twenty standard colours. Because we’re the actual factory, there’s no importer and no distributor between you and the shop that builds your cabinets — and we can price a whole community, not just one kitchen. **What are you working on?**”

About 25 seconds. It always ends on a question. **A pitch that ends on a full stop is a pitch that ends the conversation.**

The four variants

Builder / developer

> “We manufacture frameless cabinetry in Houston — our own plant, and our showroom out in Stafford. What that means for you is one local source from your model home through your final phase, volume pricing for multi-home work, and job-site delivery coordinated around your build. No ocean freight, no port delays. **How many homes are you running this year?**”

GC / remodeler

> “We build frameless cabinets and closets here in Houston. Three-quarter-inch plywood, soft-close standard, made to measure, so we can fit a room that isn’t square instead of you filling gaps. And when you need a replacement door in month eight, it comes from the same building. **What kind of work are you mostly doing?**”

Homeowner

> “We build frameless cabinetry and closets in our own Houston shop — twenty standard colours and a deeper library, made to your exact measurements, and you see a photo-real 3D rendering before anything gets cut. It’s not a boxed-in showroom set; it’s built for your room. **Which room are you thinking about?**”

Commercial / property

> “We manufacture casework in Houston — kitchens, vanities including ADA, reception, and multi-unit work. Because we’re the plant, we can hold one specification across two hundred units and phase deliveries to your schedule. **What’s the project?**”

---

3 · Twelve objections

The first thing you do with every one of these is **ask a question back.** You cannot answer an objection you haven’t understood, and half of them dissolve when you do.

1 · “You’re more expensive.”

> “Send me what you’re comparing to and let’s line them up — box material, drawer count, slide rating, whether soft-close is standard or an upcharge. Half the time the gap isn’t price, it’s specification. If it’s still more after that, at least you’ll know what you’re buying.”

2 · “How fast can you get these to me?” *(never-say bait)*

> “Once the order’s finalised, production runs in as little as two weeks depending on finish and scale. Your quote carries the committed date — I’d rather give you one I can hold than one that sounds good today. What’s driving your date?”

3 · “What’s your deposit?” *(never-say bait)*

> “Terms are set in your written agreement, and I’ll walk you through them line by line before you sign anything. I don’t want to quote a number and have the paperwork say something different.”

4 · “What’s the warranty?” *(never-say bait)*

> “Your written warranty comes with your agreement — let me send you the current sheet so you’re reading the real thing rather than my summary of it.”

5 · “I want solid wood shaker doors.”

> “Then I should be straight with you — ours are machined from MDF, not solid wood. That’s deliberate: MDF doesn’t move with humidity, so the door won’t warp or split at the joint, and it takes paint better. If solid wood is a hard requirement, I’m not your shop and I’d rather tell you now.”

6 · “My designer specified face-frame.”

> “We can do that — I’ll be straight with you about how, though. Our plant runs frameless, so the framed is a stocked line we carry rather than something we machine. If the face-frame look is the requirement, that’s the route. If what she actually wants is the traditional *style*, our shaker in frameless gets you there and it’s our own build — wider openings, more usable space in the same footprint. Worth putting both in front of her.”

Never quote a framed style, finish, size or price from memory. There is no stock sheet yet. *”Let me check what’s on the floor for that and come back to you today.”*

7 · “Can you install?”

> “Every panel is QR-tagged, and your installer scans it to see a 3D model of exactly where that piece goes. If you want it installed, we arrange our partner contractors inside Greater Houston and quote that separately — I’ll request a detailed install quote with the job. Outside Greater Houston it’s your own installer, with our install support.”

8 · “I’ve been burned by a cabinet company before.”

> “Tell me what happened.” — *Then shut up and listen.* Whatever they say is your entire sales strategy for this account, handed to you for free. Usually it’s a missed date or a missing part. Both are things being the actual factory fixes.

9 · “Just send me a price.”

> “I can, and it’ll be a guess, which doesn’t help either of us. Give me twenty minutes and rough dimensions and I’ll come back with a real number you can build a budget on. When suits you this week?”

10 · “I already have a cabinet guy.”

> “Good — you should. What do you like about working with them?” — *Write the answer down.* Then: “I’m not asking you to switch. Put me on the next one you’re pricing and see what comes back.”

11 · “Can you do better on price?”

> “Let me look at what’s driving the number first — there’s usually a smarter answer than shaving the box. Give me until tomorrow.” — *Then route it through the office. Discount authority sits with management, not with you.*

12 · “Are you the ones with the flooring?”

> “Same group, yes. UFS does flooring and building materials, Voxaura does lighting, we do cabinets and closets. If it’s useful you can run one relationship instead of three.”

---

4 · The call

Three phone days a week. Structure, not a script — but the first fifteen seconds are close to fixed.

Open *(under 15 seconds)*

> “Morning — ____ from YuDeZign, we’re the cabinet plant over in Houston. Have I caught you at a bad time?”

That last question is not politeness. It gets you a real answer instead of a polite brush-off, and “actually yes” buys you a callback slot rather than a dead number.

Ask before you tell.

> “Are you doing your own cabinets or buying them in?” “Who handles that for you?” “How many homes are you running this year?”

One ask, and only one. Not “let’s meet, and I’ll send a catalogue, and can I get your email.” Pick one:

> “Can I put twenty minutes in the diary next week and bring samples?” or “Put me on the next job you’re pricing — what’s the address?”

Close the loop before the next dial. Outcome in the system, next action dated. A call you don’t log didn’t happen.

---

5 · The voicemail

Under twenty seconds. Say your number twice, slowly, at the start and the end.

> “Morning, it’s ____ from YuDeZign — we’re the cabinet plant here in Houston. I’m calling because you’re building in ____ and we do a lot of work with builders in that area. ___-___-____. Again, that’s ___-___-____. Thanks.”

No pitch on a voicemail. The only job is to get called back.

---

6 · The first email

Three sentences. A subject line that says what it is.

> **Subject:** Cabinets for your ____ homes ____ — we manufacture frameless cabinetry and closets here in Houston; I work with builders around ____ on their kitchen and vanity packages. Worth twenty minutes to show you what we do and what it costs at volume? Either way, here’s our 2026 builder guide — the specs are all in there.

Attach the Builder booklet. Not the whole library.

---

7 · Questions to ask instead of talking

The reps who make it are the ones who ask these. All eight are on the back of your field card.

1. What are you working on right now?
2. Who’s doing your cabinets today, and what do you like about them?
3. How many homes / units / jobs is that a year?
4. When do you need cabinets on site?
5. Who else has to say yes to this?
6. What’s your budget per unit — or per kitchen?
7. What went wrong last time?
8. What would make you switch?

---

8 · Two things you say every single time

When a competitor is named: *”What do you like about working with them?”* — and write down the answer. We have no competitive intelligence as a company. In six weeks the two of you will have built the first honest picture we’ve ever had.

When you don’t know: *”I don’t want to guess at that — let me confirm and come back to you today.”* Then actually come back the same day. This costs you nothing and buys you everything. Nobody has ever lost a deal by checking.

Sales SOP

YuDeZign · Houston · v1.0 · 2026-08-05

How a stranger becomes a customer, and who does what along the way. Nine stages, four handoffs.

This is written from the company's existing operating SOP, with three deliberate changes: staff and vendor names have been replaced with roles, every hard number now points at `ANSWER-KEY.md` instead of stating a figure, and **stage 9 has been reassigned** (see H4). Nothing else was invented.

> **The rule underneath all of it:** we use the system's vocabulary, not our own. Outreach, Leads, Estimates, Sales Projects, Factory Projects. Two vocabularies is how a pipeline turns into fiction.

The nine stages

#	STAGE	SYSTEM OBJECT · STATUS	OWNER	YOU CANNOT LEAVE UNTIL
1	**Target**	Outreach	Rep	contact attempted and logged
2	**Qualify**	Lead · `CLT-####` · *Lead*	Rep	fit, need, timeline and zip captured on a Discovery Sheet
3	**Scope & measure**	Lead + appointment	Rep *(Design if complex)*	complete dimension and photo package in the project folder
4	**Design & estimate**	Estimate · `EST-####` / `QUO-2026-####` · *Quoted*	**Quote & Design team**	a priced, versioned quote is back with the rep
5	**Present & negotiate**	estimate versions	Rep	client verbally accepts a **named version number**
6	**Close**	Sales Project · `SP-####` · *Sold*	Rep + admin	signed, terms met, no open client decisions
7	**Produce**	Factory Project · `PRJ-2026-###` · *In Production*	Operations	final change lock confirmed with the client
8	**Deliver & support**	*Installed*	Operations	delivery confirmed, install-app link sent
9	**Retain & grow**	*Closed* → new Outreach	**Rep**	30-day check-in done, next opportunity logged

---

Stage 1 · Target

Your work queue is `Call-List-HOU-2026.xlsx`, split between the two of you so you never double-dial a company. Three phone days, two field days.

Every attempt gets logged with an outcome and a dated next action. **A call you don't log didn't happen** — it isn't in the pipeline, it doesn't count toward your numbers, and the other rep may call the same company on Thursday.

Qualify out fast and kindly. Outside roughly ninety minutes of the plant, or under about $3,000, say so and move on. Your time is scarcer than our capacity to quote.

Stage 2 · Qualify

A conversation becomes a **Lead** when you can answer four things: **is it a fit, is there a real need, when, and where.** All four fit on the top third of a Discovery Sheet.

Create the client record — `CLT-####` — **while you're still in the car**, not that evening. Records created later are records created wrong, and the follow-up clock starts from the conversation.

> **Follow up every new lead within 24 hours,** by phone, email or text. That standard is not new — it is already in the company's own sales job description, and it is now measured.

Stage 3 · Scope & measure

Until you are measure-certified in week 3, you do not measure a customer's space alone. You go, you scope, you photograph, and a certified measure follows. A wrong measurement is the most expensive mistake available to you and it surfaces six weeks later, in a garage, in front of the customer.

What you always capture:

- Wall-to-wall at 36″, corner to every opening, and trim-edge to trim-edge across each opening. Sum the parts and compare them to the whole — if they don't agree, one of them is wrong.
- Floor to ceiling, and the window heights that break the wall up.
- Ceiling height, and whether it changes across the room.
- Every service: water supply, drain, gas, outlets, switches, vents, and their heights off the floor.
- **Photographs of everything**, including the plumbing and electrical, uploaded to the project folder.

Appliances and sink are not optional and they are not "to follow." Brand, model, and actual dimensions, plus hinge side. A cabinet run designed around a guessed fridge is a cabinet run that gets remade at our cost. If the customer hasn't chosen yet, that is a real answer — write it down and schedule the follow-up, don't design around a placeholder.

If the client measures instead of us, they own the numbers and you say so, out loud and in writing. Our measuring guide goes to them, and their measurements come back before design starts.

Fees are in `ANSWER-KEY.md` §4. They are credited on conversion — always say the credit in the same breath as the fee.

Stage 4 · Design & estimate — the black box

You hand over a complete packet and you get back a priced, versioned quote. What happens in between is the Quote & Design team's, not yours.

H1 · The Quote Request Packet. This is the single highest-failure interface in the whole process, so it has been made as simple as it can be: **a completed Discovery Sheet is the packet.** You never write the same

information twice.

It is one sheet, two sides: **intake on the front, a quarter-inch grid page on the back** for the layout sketch, with the measuring order and the sum-checks printed alongside it. Draw on the back — not in a margin, and not on a separate scrap that gets separated from the form.

The completeness strip at the bottom of the sheet is the bounce list. If a box is unticked, the packet comes back, and the bounce is counted against your first-pass acceptance rate. That metric is not there to punish you — it is the earliest honest signal of whether a rep is going to make it, and it is far kinder to fix in week three than in month three.

H2 · What comes back. A quote with a code and a version. From that moment:

1. You present **that version.** Not a number from memory, not a number you adjusted in the truck.
2. You never show what anything costs us — not materials, not tiers, not any internal sheet.
3. You have **no discount authority.** Every request goes through the office before you answer.
4. Any revision creates a **new version**. You never edit a quote in place and you never present two versions as if they were one.

Stage 5 · Present & negotiate

Present in person where you can. A rendering emailed cold gets skimmed; a rendering walked through gets approved.

Say what is **included and what is not** — carcass colour, door finish, edge banding, shelf count, fillers, side panels — before they ask. Every dispute this company has ever had started with something someone assumed was in the price.

The stage ends when the client accepts **a named version**. “They’re happy with it” is not an exit condition. Write the version number down.

Stage 6 · Close

H3 · Rep → Operations. Four conditions, all four, no exceptions:

1. Design approved in writing, against a named version.
2. Agreement signed.
3. Payment terms met per the signed agreement.
4. **No open client decisions.** No “they’ll confirm the handle later.” Later is a change order.

Change orders. Anything that moves after approval is documented before it is actioned — in writing, with the price and schedule impact stated, and signed. *Every* change order gets documented **even when the customer confirmed it by text.* Especially then.

Terms, deposits and card fees are on the signed agreement. See `ANSWER-KEY.md` §5 — **do not quote a deposit figure**.

Stage 7 · Produce

Operations owns this. Your job is exactly two things:

- **Stay out of the plant's way.** Do not call the shop for a status. Ask Operations.
- **Own the client's expectations.** If something moves, the client hears it from you, early, with a new date — not from a driver on delivery day.

Before you say any delivery date out loud on a job over 250 cabinets, get a plant load check. The plant runs about 500 cabinets a month. A 54-unit job is one and a half to two months of the entire factory. Selling more than we can build is worse than selling nothing.

Stage 8 · Deliver & support

Operations coordinates. The client gets a link to **InstallAssistant**, our free iOS app, and every panel carries a QR sticker that the app reads to show a 3D model of where that piece goes.

> Send the App Store link, or just tell them to search the store for *InstallAssistant*. **Any install-app URL you find in an archived SOP is out of date — do not pass it on.**

We provide install support everywhere. Installation itself goes through our partner contractors, inside Greater Houston only, and always on a separate detailed install quote requested with the job (Damian, 2026-10-23). Never promise installation as part of the job or as included: YuDeZign's own crew does not install, and both signed contracts say so. Outside Greater Houston the customer's installer works from the app. See `ANSWER-KEY.md` §4 and §12.

Damage or shortage is noted on the packing slip at delivery. Anything found later goes to orders@yudezign.com the same day, and you tell the client the claim window rather than letting them find out about it.

Stage 9 · Retain & grow

H4 · This changed, deliberately. Operations used to own everything after delivery. Now it splits:

	OWNER
Damage, missing parts, install-app link, install photos	**Operations**
The 30-day check-in and the next opportunity	**Rep**

The reason is simple: this is where the second order comes from, and Operations has no reason to ask for one. A builder who buys once is a transaction. A builder who buys twice is the entire strategy.

At 30 days you call. Not email. Ask how it went, ask what you'd fix, and ask what's next. Log the answer and set the next action. That call is also where your only real competitive intelligence comes from.

Flagged as a change from the December 2025 document so it gets approved rather than discovered.

Where things live

Clients, estimates, quotes, projects, statuses	**The ops system — the system of record**
Drawings, photos, signed documents, quote files	The project folder on the Drive
Your activity counts	`Weekly-Sales-Report-<REP>.xlsx`, Friday
Answers to customer questions	`ANSWER-KEY.md`

A deal that is not in the system does not exist. It isn't discussed at the Friday meeting, it doesn't appear in the pipeline, and it doesn't count toward your numbers. This is not bureaucracy — the company already has a 289-row project register whose status and value columns are almost entirely blank, which is exactly what happens when record-keeping is optional.

Old term → what we say now

The archived SOPs use different words. When you find one:

OLD	NOW
Inquiry / project start	**Outreach**, then **Lead**
Sales Order, Quotation Log	**Estimate** + **Quote** (`QUO-2026-####`)
Project Information Sheet	**Discovery Sheet**
Submit to the SP Team / the vendor	Hand off to **Operations**
Colfax	**the plant**
Order in production	**Factory Project** (`PRJ-2026-###`)
Job completed	**Installed**, then **Closed**

Anything in an archived SOP that states a lead time, a deposit percentage or a warranty length is **superseded by** `ANSWER-KEY.md`, regardless of how official the old document looks.

KPIs and Goals

YuDeZign · Houston · August – December 2026

The rule that comes before any metric

> **Dollars and customer records live in the ops system. Activity counts live in your weekly workbook. The monthly roll-up goes to the work log — you never touch that one.**

Three surfaces, one owner each. **A metric with no named capture surface is not on this page**, because a number nobody can produce is a number everybody argues about.

Leading indicators — what you control

These are the ones you can hit on a bad week, and they are the ones that predict the lagging numbers eight weeks out.

METRIC	PER REP	CADENCE	CAPTURED IN	WHERE THE NUMBER COMES FROM
Dials	**125/wk** in ramp → 150 from Oct	daily	weekly workbook	3 phone days × 40 + 2 field days × 15
Decision-maker connects	**12/wk**	weekly	weekly workbook	8–12% connect rate on cold B2B construction calling
In-person touches	**8/wk**	weekly	weekly workbook	2 field days × 4 stops
New accounts opened (`CLT-####`)	**2/wk**	weekly	**ops system**	the company's own standard: 30%+ of visits should open an account
Follow-up inside 24 hrs	**95%** — no ramp allowance	weekly	ops system timestamps	already the written standard in the sales job description
Discovery / measure appointments	**1/wk** rising to 2	weekly	ops system + calendar	~50% of new accounts
Standard estimates issued	**3/wk** from Sept	weekly	**ops system**	—
Bulk estimates (≥10 cabinets or ≥5 units)	**2/mo** Sept → 3/mo Oct–Nov	monthly	ops system, flagged	see §"One number we changed"
Quote-request first-pass acceptance	measured from week 1 → **80%** by Oct	weekly	quote-team bounce log	—

The one to watch is first-pass acceptance. It is the earliest honest signal of whether a rep is going to make it — earlier than dials, much earlier than revenue — and it is entirely fixable in week three and painful to fix in month three.

Lagging indicators — what the leading ones produce

METRIC	CADENCE	CAPTURED IN	STARTING EXPECTATION
Quote → sold conversion	monthly	ops system status transitions	**15–20%** through Q3. Industry runs 25–35%; a new rep with no relationships does not start there
$ booked	monthly	ops system, at *Sold*	§"The numbers"
Cabinets booked	monthly	ops system, against capacity	§"The ceiling"
Average order value	monthly	ops system	anchors: ~$2,600 single vanity · ~$6K one-off kitchen · $31,880 custom home · $180/cabinet at volume
Second order rate	quarterly	ops system	reads zero until Q4. **Measure it from day one anyway** — it is the whole builder thesis

The numbers

MONTH	BOOKED	WHAT IT ACTUALLY IS
August	*(counts toward the Aug+Sept figure)*	Train, exhibit, triage. Aug 5–8 training and certification, Aug 9–10 booth build, **Aug 11–12 the show — target 75 leads, 100 in a good show**, then every one of them worked
September	**$100K across August and September combined**	The show leads convert. This is the first month the engine is running
October	**$100K** — plus **≥1 signed builder or multi-family award**	The month that matters
November	**$100K**	Prove it repeats. First second-order from an Aug/Sept customer
December	assume **$100K, front-loaded** — *flagged for confirmation*	Only ~2.5 real selling weeks. Everything open gets dispositioned before the break

Say the quiet part out loud: August is a training-and-show month. Realistically most of the Aug+Sept $100K lands in September. Nobody should read a light August as failure, and nobody should conclude in week two that the numbers are theatre — they are not, they are just back-loaded by one month.

Activity commitments behind the dollars

	AUG	SEPT	OCT	NOV
Team dials / week	— *(training + show)*	250	300	300
Site visits / week	12 in the month	16	16	16
New accounts / month	show leads	16	16	16
Standard estimates / month	8	24	24	24
Bulk estimates / month	—	**4**	**6**	**6**

August's own gate, and it is not a dollar figure: by **Aug 28**, every single show lead has been touched at least three times and given a disposition. At seventy-five leads that is roughly nine touches a day across two reps — comfortable, which is exactly why missing it would be inexcusable. A show lead that is still sitting undispositioned after fifteen days is dead, and pretending otherwise is how a company spends $20,000 on a booth and books nothing.

The ceiling

The plant runs about **500 cabinets a month** for standard, replicable work.

Blended value per cabinet runs about **$247** at the target 70/20/10 mix, and about **$332** at the custom-heavy mix you will actually sell first — because the list you can dial in August is 396 custom-home builders and only 8 build-to-rent.

So **$100K a month is roughly 300 to 405 cabinets — 60% to 80% of the entire plant.** And the plant also has to feed our existing dealer accounts and the commercial work that has nothing to do with either of you.

That makes two things mandatory:

1. **A Plant Load line, filled in weekly by Operations.** It goes at the top of the Friday agenda, before any pipeline discussion.

WEEK ENDING	CABINETS COMMITTED	% OF 500	FREE CAPACITY

1. **Anything over 250 cabinets gets a load check before a delivery date is spoken aloud.** Before the sentence, not after the quote.

Selling more than we can build costs us the relationship *and* the next three. This is the one place where hitting your number the wrong way is worse than missing it.

One number we changed, and why

The June strategy deck says *"~1 big quote a day, 15–30 bulk quotes in two months."*

That is the quoting system's capacity, not a rep quota. The engine can produce a bulk quote a day. Two brand-new reps cannot *source* 15–30 qualified bulk opportunities in two months — and setting it as a quota guarantees failure in month one, which teaches you that the numbers aren't real.

So the claim stays in the strategy and the quota becomes **15–20 bulk quotes by the end of November**, across both reps.

And a whale never gets blended into a monthly quota. The largest job we have quoted is ~$325,000 — larger than the entire Sept–Nov target combined. It is scored separately, as a binary milestone: *at least one bulk award signed by Oct 31*. A rep who hits every activity number in a month where no whale lands is succeeding, and the scoreboard should say so.

Cadence

Daily standup — 10 minutes, Aug 13 to Aug 28 only. Three numbers each: touches yesterday, appointments booked, quotes out. Then it stops. A permanent daily standup for two people is theatre.

Friday, weekly.

1. Plant load (Operations fills it in first).
2. Each rep's Summary tab from `Weekly-Sales-Report-<REP>.xlsx`.
3. **Pipeline review, run off the ops system screen — not off a spreadsheet.**
4. Blocked answers and anything new for the Answer Key.
5. Next week's target list.

> **A deal that is not in the system is not discussed and gets no credit.** No exceptions, including for deals that are obviously real. This is the only enforcement that reliably works, and we know it is needed: the existing project register has 289 rows and its status and value columns are about 98% empty. That is what optional record-keeping produces.

Monthly. Lagging review, conversion rates, average order value, and a written roll-up logged to the work log so the existing progress-report tooling picks it up. No new systems.

Quarterly. Second order rate. Mix against the 70/20/10 target. Re-baseline the quotas on real data instead of the estimates on this page.

What good looks like at each point

End of week 1 (Sat Aug 8)	Both reps booth-certified. Exam passed, pitch clean twice, never-say section 100%
End of August	Every show lead touched 3× and dispositioned. 12 site visits. First estimates out
End of September	The engine is visibly running: 16 accounts a month, 24 estimates, 4 bulk quotes, first bookings landed
End of October	**At least one signed builder or multi-family award.** Conversion rate measurable for the first time
End of November	A second order from an August or September customer. Q1-2027 pipeline visible
End of December	Nothing open and undispositioned. 2027 target list built. Quotas re-baselined on real numbers

---

What is not measured, on purpose

Hours worked. Emails sent. Miles driven. CRM notes written. All easy to count, none predictive, and all trivially gamed. If a metric can be satisfied without a customer being better off, it is not on this page.

Booth Playbook — Houston Builders Expo

HBE2026 · NRG, Houston · Tue–Wed Aug 11–12, 2026 · booth build Sun–Mon Aug 9–10

Two days. Somewhere between 6,000 and 10,000 pre-registered buyers walk that hall, and about 85% of them have purchasing authority. This is the largest single input to your pipeline this year.

The target is 75 captured leads across the two days. A hundred would be a good show. Everything below is built backwards from that number.

The arithmetic, and what it actually means

Two reps, roughly seven floor hours a day, is about fourteen selling hours. Seventy-five leads across that is **a little over five leads an hour between you** — which is not a race.

That matters, because the usual trade-show advice is *"qualify in ninety seconds and move."* At this volume that advice is wrong. **You have time to have a real conversation with someone who is real.**

The scarce thing here is not minutes, it is **qualified** conversations. So:

- Someone who builds, renovates or specifies cabinets — **give them five to ten minutes.** Ask, listen, write a rich scope note. That note is what makes your follow-up land next week.
- Everybody else — **thirty seconds, a flyer, and back to the aisle.** Kindly, but back.

The failure mode at 75 leads is not being too slow. It is **standing in an empty booth talking to each other**, or letting one enthusiastic browser eat forty minutes. Watch for both.

The deep conversation still happens next Tuesday in their office. The booth exists to earn that meeting — but at this volume you can afford to earn it properly rather than in a rush.

Roles — swap every 90 minutes

	WHERE	JOB
Front	~5 feet out, in the aisle	Work traffic. Open. Qualify in 20 seconds. Hand off or write a card
Close	Inside, with the samples and the card box	Take handoffs. Work the finish boards. Write the detailed cards

Swap on the hour and a half. Aisle work is exhausting and a tired Front stops making eye contact, which is the entire job.

Four rules, and they are not suggestions:

- Never both idle.
- **Never both on your phones.** One person on a phone in an empty booth reads as busy. Two reads as closed.
- Never both in the same conversation.
- Never sit down, never eat in the booth. Take breaks off the floor, staggered.

The open

> **”Are you building or renovating right now?”**

A question, not a pitch. It routes in four seconds. Then pick your thirty seconds from `WHAT-TO-SAY.md` — builder, GC, homeowner, or commercial.

The default thirty seconds:

> “We’re YuDeZign — we manufacture frameless cabinets and closets right here in Houston, in our own plant. Three-quarter-inch plywood, soft-close standard, over thirty finishes. Because we’re the actual factory, there’s no importer and no distributor between you and the shop that builds your cabinets — and we can price a whole community, not just one kitchen. **What are you working on?**”

Then stop talking.

Qualify in twenty seconds

Three things. That’s all you need to decide whether this is a card or a flyer:

1. **What are you building?**
2. **How many?**
3. **When?**

Write a card if: they build, renovate, specify or buy cabinets — at any volume — anywhere inside about ninety minutes of the plant.

Hand a flyer and move on if: they’re outside the radius, they’re a supplier selling *to* us, they’re a student, or they’re collecting tote bags. Say *”here’s our guide, good luck with the show”* and turn back to the aisle. You are allowed to end a conversation. Doing it kindly and quickly is a skill, and it is worth more at a booth than closing.

Capture — on paper, on purpose

The digital capture tool is specified but not built, and the show is days away. **We are not improvising an app for a hall with bad wifi.** The specification itself says the CSV fallback is a working lead list a human can work from on day one, so that is what we are doing.

How a card gets written:

1. Every card is **pre-numbered** — `HBE2026-001` upward. That number is what stops a lead being transcribed twice.
2. Your **initials and the time** go on every card. The time matters: it drives the follow-up clock.
3. **Tick boxes, don’t write sentences** — except in the scope line, which is the one part that should be in their words.
4. **The scope line is the most valuable thing on the card.** “Doing 14 townhomes off Westheimer, hates his current lead times” is worth more than a perfectly spelled email address. It’s what makes your follow-

up sound like a person instead of a blast.

5. **A business card is clipped to a lead card. Never collected loose.** A loose business card with no context is a dead lead — and at this volume, every lead you lose is over one percent of the show.
6. **40 seconds to write the card**, even though you had ten minutes for the conversation. Write it the moment they walk away, not later — you drilled this at the booth on Aug 9.

HOT or REST — decide at the moment of capture

Two physical boxes.

HOT = timeline is *now* or *1–3 months*, **or** ≥5 units, **or** they asked for a price. **REST** = everything else.

Sort it **while you still remember the conversation.** Even seventy-five cards blur together by Thursday — and this single mechanic is what makes the 48-hour triage possible at all.

The QR form

A Google Form mirroring the same fields is on the booth graphic and on the flyers, for visitors who would rather type than talk. It has a consent checkbox. It is a supplement to the cards, not a replacement — most people at a booth will not fill in a form on their phone.

Every evening — the part that decides whether this worked

Cards get transcribed into `LEADS-HBE2026.xlsx` the same night. Both nights.

This is the highest-risk item in the entire show plan, because it is boring, it happens when everyone is exhausted, and skipping it has no visible consequence until September.

- ~40 cards a night × 40 seconds ≈ **half an hour a night.** At this volume it is a small job, which is exactly why it gets skipped — it never feels urgent.
- **Somebody's name is against it in `BOOTH-KIT.md`.** An admin is still better, but at thirty minutes a rep can do it after dinner if nobody else is free. What is not acceptable is nobody doing it.
- Card number goes into the notes column as `card=HBE2026-014`. The paper is the backup — keep it, boxed, until the whole list is worked.

Seventy-five leads that get worked beat three hundred that sit in a box. This is the step where that is decided.

Tuesday night matters more than Wednesday night. Day-one cards typed on Tuesday evening mean the Wednesday-morning follow-up is already going out while the show is still running — which is the single fastest any lead in this company has ever been worked.

What you hand out, and to whom

	GIVE THEM
Builder or developer	**Builder** booklet edition + Builder Companion insert
GC / remodeler	**Contractor** edition
Homeowner	**Home** edition
Commercial / property	**Commercial** edition
Anyone at the closet, mudroom, credenza or ADA vanity display	The showcase flyer for that display
Anyone who asks about finishes	The finish QR — **yudezign.com/finishes**

Don’t hand out the whole library. One booklet, one insert, one card. A visitor with five documents reads none of them.

At the booth, three things stay true

You are still bound by the never-say list. A trade show floor is the single worst place to improvise a warranty or a deposit — it is loud, you are tired, and the person you’re talking to remembers what you said. Side 2 of your field card is in your pocket for exactly this reason.

”Let me confirm that and come back to you today” is a completely acceptable answer at a booth. It is also a reason to call them, which is worth more than the answer.

Whoever asks “so are you Yukon or YuDeZign?” — until it is settled: *”One group. I’m on the cabinetry side.”* Don’t over-explain the org chart to someone who asked a small-talk question.

Two hours before the doors

- Cards, pens and both boxes on the counter. Not in a bag under the table.
- Field cards in pockets — both of you.
- Booklets sorted by edition, stacked so you can grab the right one without reading spines.
- Finish boards where a visitor can touch them. **People buy cabinets with their hands.**
- Phones on silent, in pockets.
- QR sign visible from the aisle.
- Water somewhere out of sight.

Closing each day

- Both boxes stay with a named person, never in the booth overnight.
- Transcription happens **that night.**
- Five-minute debrief: what got asked most, what nobody understood, what we ran out of. **Write down every question you couldn’t answer** — that list becomes the customer FAQ in week 3, and it will be a better document than anything we could have guessed at in advance.

The 48 Hours

HBE2026 · Aug 11 – Aug 28, 2026

A trade show does not produce revenue. It produces a box of paper that decays at roughly 20% a day. This document is what turns the box into a pipeline.

The whole plan rests on one number: at ~75 leads with about 20% hot, that is ~15 phone calls across two reps in 48 hours — seven or eight each. That is comfortably achievable, which removes every excuse. At three hundred leads you could argue you ran out of hours. At seventy-five you cannot.

The schedule

WHEN	WHO	WHAT
Each evening, both days	Admin or rep	Transcribe every card into `LEADS-HBE2026.xlsx`. **Same night** — about half an hour
Each evening, both days	Both reps	Text or email **every lead captured that day** — two sentences, personalised from the scope line
T + 24 hrs	Both reps	**Call the entire HOT box.** One goal: book a date
T + 48 hrs	Both reps	Anyone not reached gets a second touch on a **different channel** — called → email, emailed → call
Fri Aug 14	Both reps	The REST box enters the nurture sequence
Aug 28	Manager	**Gate: 100% of leads touched ≥3× and dispositioned**

Because the show now runs Tuesday–Wednesday, **the HOT calls land on Wednesday and Thursday — inside the working week.** That is a real advantage over a show that ends on a Thursday and pushes the calls into a weekend. Use it: Thursday and Friday are your two best phone days of the year.

Same evening — the two-sentence message

Sent the night you met them, while they still remember your face. Not the next week.

> “Great to meet you at NRG today — you mentioned the **14 townhomes off Westheimer**. I’ll call you Thursday with what a cabinet package looks like at that volume. — ____, YuDeZign”

The bolded fragment is the whole point. It comes straight off the scope line of their card. It is what stops the message reading as a blast, and it is why the scope line is the most valuable thing on the card.

If the scope line is blank, you have a generic message and a much weaker lead. That is the cost of skipping it in the moment.

T+24 — the HOT calls

Phone. Not email. HOT leads get called, and the call has exactly one goal: **book a date.**

Do not pitch. Do not quote. Do not answer a spec question in depth. Book the meeting and get off the phone — the whole reason you're calling within 24 hours is that they still remember the conversation, and you spend that credit on a calendar slot, not on a product discussion.

> "____, it's ____ from YuDeZign — we met yesterday at NRG. You said you were starting the ____ in ____. I'd like twenty minutes with you and a set of samples. Is Thursday morning or Friday afternoon better?"

Two options, not "when are you free." An open question gets "let me check and get back to you," which is where leads go to die.

If you get voicemail: leave the twenty-second version, then send the text. Two channels, same hour.

T+48 — the switch

Anyone not reached gets a **different channel**. Called and got nothing → email. Emailed and got nothing → call. Same person, same day, different door.

This one mechanic recovers a meaningful share of leads that a single-channel follow-up simply loses.

The REST box — from Aug 14

Five to seven touches over about six weeks. Mixed channels. Every touch gives them something rather than asking for something.

#	WHEN	CHANNEL	WHAT
1	Fri Aug 14	Email	The right booklet edition for their segment + "what are you working on this fall?"
2	Tue Aug 18	Call	Qualify properly. Are they real, when, who decides
3	Mon Aug 24	Email	Something useful and specific — a finish range, the measuring guide, a relevant project
4	Tue Sept 1	Call	The direct ask: put me on the next job you're pricing
5	Sept 10	Email	A short case: what we did for a comparable builder or remodeler
6	Sept 21	Call	Last active attempt
7	Oct	Email	Quarterly nurture, if still unqualified but not dead

---

Disposition — say what happened

Every lead gets one of these, and nothing stays as *new* past Aug 28.

	MEANS
working	Contact made, still in play
qualified	Real project, real timeline, real budget — becomes a `CLT-####`
unqualified	Wrong fit, wrong geography, no project. **Say so.** It is a good outcome
won	Booked
lost	Went elsewhere — **and you write down why**, because that is the only competitive data we have

”Unqualified” is not failure. A clean no in week two is worth more than a maybe you’re still chasing in November.

The Aug 28 gate

By Friday Aug 28, every HBE2026 lead has been touched at least three times and carries a disposition.

Not “most.” Not “the good ones.” All of them.

A show lead that is still undispositioned after fifteen days is dead, and carrying it in the pipeline just makes the forecast dishonest. This gate is checked at the Friday meeting on Aug 28, off the system, lead by lead if necessary.

And then measure it

This company has run trade shows before and there is **no record anywhere of how many leads any of them produced, what they converted, or what they were worth.** Not one number, from any prior show.

So, by **Sept 30**, in writing:

- Leads captured, by segment and by timeline — against the 75 target
- How many became `CLT-####` records
- How many became estimates, and their total value
- How much was booked, and from which segment
- Cost of the booth ÷ revenue booked

That single page is what tells us whether to do Dallas and Austin — and it is the first honest show ROI number this company will ever have had.
