YUDEZIGN

The product.

Everything a customer can ask you about the thing in the box — what we make, what it is made of, what goes in it, and what it costs to get it to them.

Keep this. It is the reference you come back to, not something you read once. Write in the margins — there are still questions our own documents cannot answer, and they are marked where they occur.

WHAT IS IN HERE

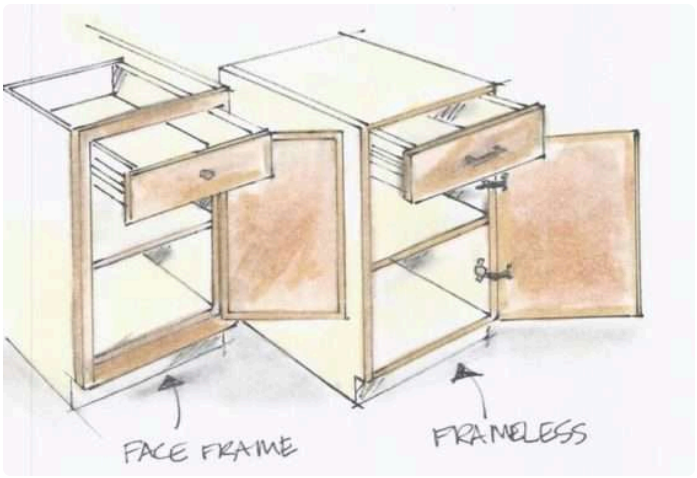

PG		PG	
2	Frameless — and the framed we *sell*	9	Hardware
3	Anatomy of the box	10	Accessories
4	Standard dimensions	11	Lighting
5	Door styles & the shaker disclosure	12	Finishes
6	Overlay	13	Closets — and what they are made of
7	Openings — J-pull, gola, push	14	Vanities, commercial & multi-family
8	The four Styles	15	**Prices you can actually say**
		16	Check yourself · where things live

THE FIVE YOU CANNOT GET WRONG

- Explain **frameless** to a builder in two sentences, without a diagram
- We **build** frameless. We **stock and sell** framed. Different verbs
- Volunteer the **shaker disclosure** before a customer discovers it
- **Same hinge on every Style; slide by box depth.** No hardware upgrade to sell
- Never invent a price. The ones you *can* say are on page 15

No face frame. That is the whole difference.

An American cabinet has a wooden frame screwed to the front of the box, and the door hangs off that frame. A European cabinet does not. The hinge mounts straight to the side panel.

Face frame, left · frameless, right. Note what the frame does to the opening

WHY ANYBODY CARES

That frame is usually an inch and a half of wood on each side. It sits *in front of the opening*, so you reach past it every time. Take it away and the opening is as wide as the box.

Roughly fifteen per cent more usable space across a run — and drawers that are genuinely full width, not full width minus the frame.

> **SAY IT LIKE THIS**
>
> "Ours is European frameless. There's no wooden frame across the front, so the hinge goes straight onto the side panel and the opening is the full width of the box. You get about fifteen per cent more room, and the doors sit flush in a continuous line."

WE BUILD

- **Frameless only** — European full-access
- Flat-panel (slab) and shaker doors
- Kitchens, vanities including **ADA**
- Walk-in and reach-in closets
- Mudrooms, credenzas, coffee bars
- Laundry, offices, media walls
- Multi-family and commercial casework

WE DO NOT BUILD

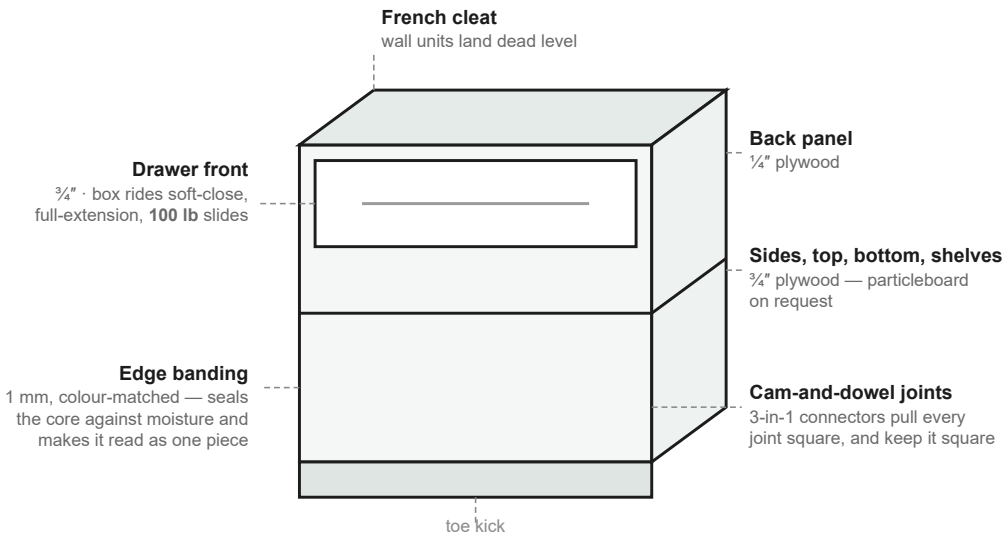

- **Framed** — **we stock it, we don't build it**
- Raised-panel doors
- Inset doors
- **Solid-wood shaker** — ours is machined MDF
- Countertops
- A single box taller than **96″**

BUILD AND SELL ARE DIFFERENT VERBS — YOU NEED BOTH

We **manufacture** frameless only. We also **stock an RTA framed line** we buy in and resell, so "do you do framed?" is a **yes** — followed straight away by whose it is: *"that's a stocked product we carry; our plant runs frameless."* Volunteer it, like the shaker. Raise framed only when they need it **now**, want a **face-frame look**, or the budget won't reach Essential — and **never quote a framed style, size or price from memory.** There is no stock sheet yet.

Anatomy of the box.

Six answers live on this page, and a customer will ask for four of them in the first ten minutes.

THE THREE BOARDS

BOARD	WHERE IT BELONGS
Plywood	The **cabinet box**. Strong, holds a screw, survives a wet sink base
Particleboard	**Door and panel cores** — and most of the closet system. Also the whole box, if a customer needs cost out
MDF	Door cores, especially **shaker**: machines cleanly, takes paint raw. Some closet components

WHAT A CUSTOMER IS REALLY ASKING

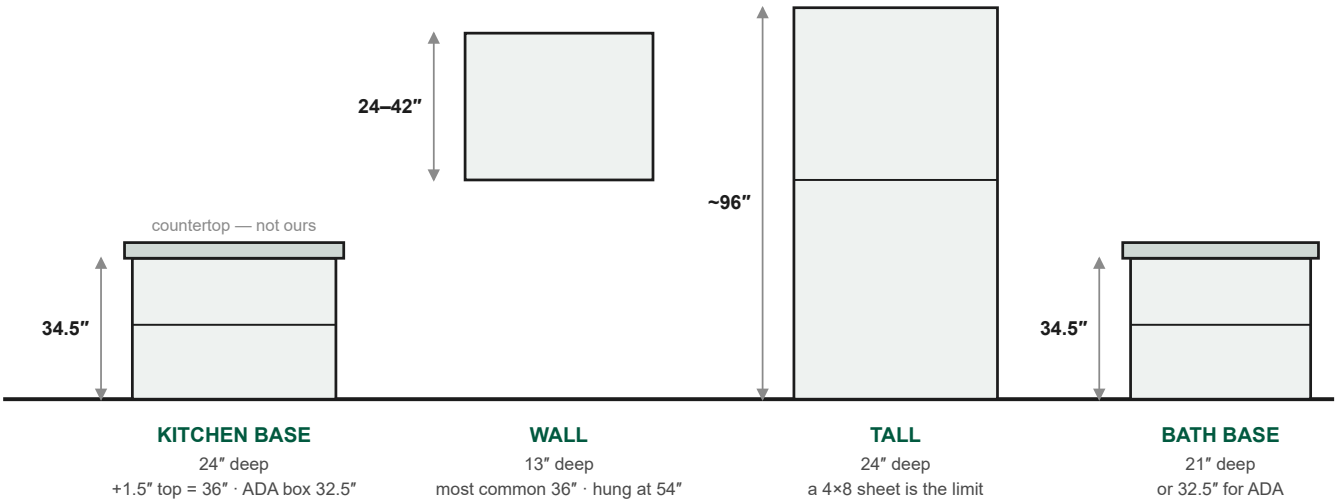

"Is it real wood?" almost always means *"is it cheap?"* Answer the real question:

> "The box is three-quarter-inch plywood — that's real wood, and it's the part carrying the load. The doors are engineered board, deliberately: they stay flat in Houston humidity where solid wood moves."

Always ¾ inch. Never the metric — this is the US market, and some of our own flyers get this wrong.

Learn this page.

A rep who can lay out a kitchen on a napkin, in front of a customer, in stock sizes, is worth three who go back to the office to check.

	DEPTH	HEIGHT	WIDTHS
Kitchen base	24″	**34.5″** → 36″ finished	3″ increments, 9″–42″
Base — ADA	24″	**32.5″** → 34″ finished	same
Wall	13″	24 / 30 / **36** / 42″	12 / 15 / 18″ single · 24 / 30 / 36″ double
Tall	24″	~96″ max	15 / 18 / 21″ single · 30 / 36″ oven
Bath base	**21″**	34.5″ or 32.5″ ADA	3″ increments

THE THREE THAT GET MISSED

Why 34.5″? A 1½″ countertop lands the finished height at 36″. Say the finished number to a homeowner and the box number to a trade.

Bath base is 21″, not 24″. The single most common dimension error.

96″ is a hard ceiling. Plywood comes in 4×8 sheets, so a taller single box would need a sheet that does not exist. Taller runs stack.

WORTH PRACTISING

Lay out a 12-foot L-shaped kitchen using only stock sizes in 3″ increments. Do it a few times on paper and you will stop needing the table.

Widths run **9″ to 42″ in 3″ increments**. Anything outside that is a filler or a custom panel — both are fine, both go on the Discovery Sheet.

Two of these three. And you say which.

Raised Panel

Shaker

Flat Panel / Slab Door

STYLE	OURS?	WHAT YOU SAY
Raised panel	**No**	“That’s a traditional American profile — not something we run.”
Shaker	**Yes**	Machined MDF, custom, not recommended. **Volunteer this.** See below
Flat panel / slab	**Yes**	The core of the range. Every Style offers it

THE SHAKER DISCLOSURE — THE MOST IMPORTANT THING ON THIS PAGE

A traditional shaker is **five pieces of solid wood**; ours is **one piece of MDF with the profile machined in**, finished in RTF. It is a custom door: it costs more than the slab and we don’t recommend it. Shaker buyers usually belong on the stocked framed line.

A customer who finds this out on their own concludes we hid it. A customer who hears it from you in the first meeting concludes we know what we are doing. **It is the same fact. The only variable is who says it first.**

VOLUNTEER IT, IN THIS ORDER

“Our shaker is machined MDF rather than five pieces of solid wood — and that’s on purpose. MDF doesn’t move with humidity, so the door can’t warp or split at a joint the way a wood shaker will, and it takes paint better because there’s no grain. In Houston that matters more than it would somewhere dry.”

NEVER

Never say or imply **solid wood** about a shaker door. Not “solid feel,” not “solid construction,” not “real wood look” in a sentence about the core.

Shaker · multi-family spec

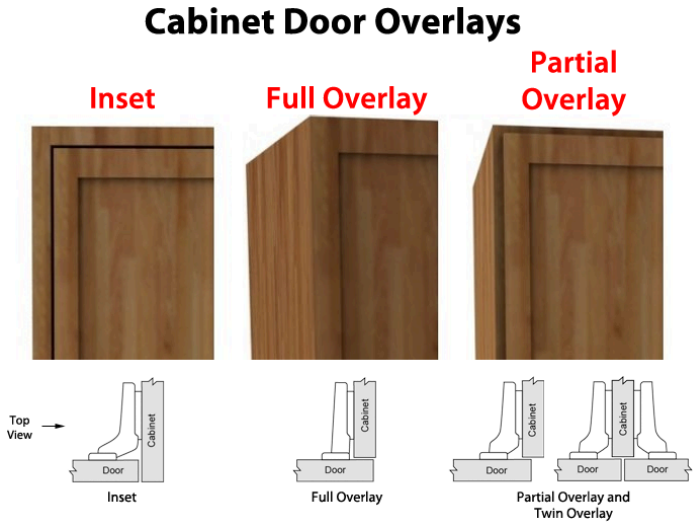

Flat panel · showroom kitchen

Flat panel · Weathered Bark

How much of the box the door covers.

Overlay is set by the hinge and its base plate — so a designer specifying an overlay is really specifying hardware. This is the question designers ask that reps fumble.

Inset	Door sits *inside* the opening, flush with the front. **We don't make this**
Full overlay	Door covers the side panel completely. **Kitchens and vanities**
Half overlay	Two doors share one panel, each covering half of it. **Closets.** The diagram calls it *partial* — same thing

Frameless plus full overlay is what produces the wide openings and the unbroken line across a run. Those are the two things worth saying out loud when somebody asks why frameless.

> **WHY CLOSETS ARE DIFFERENT**
>
> A closet is a row of units side by side. Half overlay lets two adjacent doors share a single panel between them, so you are not paying for two panels where one does the job.

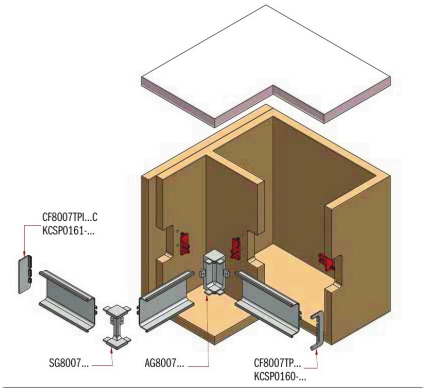

THE CONNECTION TO REMEMBER

Overlay is a hardware decision. The hinge cup sits in the door; the base plate sits on the side panel; the distance between them is the overlay. Change the base plate and you change the overlay — which is why "can you do a different overlay?" is a real question with a real answer, not a styling preference.

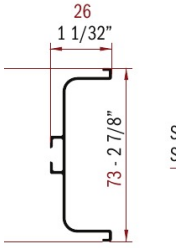

Four ways a door opens.

OPENING	WHAT IT ACTUALLY IS	WHERE IT FITS
Handles	Bar pulls, arch pulls, knobs, in three hardware finishes	Every Style. The default
J-pull	A shaped lip on the edge of the **door itself**. Handleless look with no separate part to buy	Handleless on a budget
Gola	A continuous aluminium **channel profile set into the carcass**. The door stays perfectly plain; your fingers go into the channel	Reserve and Atelier
Push-to-open	A sprung latch. No handle, no channel — press and it releases	Signature and up

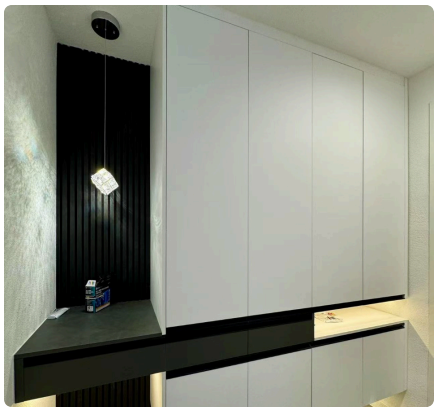

GOLA IS IN THE BOX. J-PULL IS ON THE DOOR.

Gola — the channel is part of the **carcass**. Horizontal profile under the countertop, vertical profiles between units, joined at the corners

Section through the profile. It is an extrusion with a finger recess — roughly 1″ across, and it carries the door edge

J-pull — our own work. The shadow line at the top of each drawer is a shaped edge on the **door**. No channel, no extrusion

A DESIGNER WILL CATCH YOU ON THIS ONE

J-pull is not gola. They look almost identical in a photograph and they are different products at different prices: gola is an aluminium extrusion fitted into the cabinet, J-pull is a machined profile on the door edge. We have already mis-captioned one of our own project photos over exactly this. If you are not certain which one a picture shows, say “handleless” and check.

Hardware finishes	Brushed nickel · polished chrome · matte black
Gola finishes	Anodised silver · matte black · brushed gold on Atelier

Gola is an **aluminium extrusion**, anodised or powder-coated. It is a finger recess and a door edge — nothing else is built into it.

Same box. Same motion. Different skin.

The carcass **and the hardware** are identical across all four Styles. Each carries five standard colours; the door surface, finish family and accessory programme move.

STYLE	WHERE IT FITS	DOORS	STANDARD COLOURS
Essential value	Rentals, spec homes, hardworking family spaces	Woodgrain & solid TFL	White, Black, Acacia Honey, Rock Solid, First Class
Signature mid	Warm kitchens, dens, lived-in spaces	European TFL, deep textures	Stone Green, Misty Blue, Soft Beige, Warmia Walnut, Casella Oak
Reserve mid-high	Modern builds where the architecture speaks	Super-matte, soft-touch, high gloss	White, Black, Cream, Stone Grey, Relax Green (soft-touch)
Atelier high	Flagship kitchens, media walls, hospitality	Lacquered high gloss & perfect matt	Carte Blanche, Black, Vanilla Orchid, Midnight Sun, Steel Blue

WHAT ACTUALLY MOVES AS YOU GO UP

	INTERIOR	OPENING	EXTRAS
Essential	UV-cured birch ply	Handles and knobs	—
Signature	+ white melamine	+ push-to-open	Interior fittings programme — pull-outs, lazy-susans, trays
Reserve	+ white melamine	+ **gola handleless**	—
Atelier	+ custom coloured laminated ply	gola incl. **gold**, push integrated	Integrated lighting on display units · premium accessory programme · custom laminate lay-up

SAY IT LIKE THIS

“Same box, same motion, different skin. A rental spec and a flagship kitchen close on the identical hinge and the identical slide — what you’re choosing between is the door surface and the finish family. So you can move up or down without giving up the cabinet.”

THERE IS NO HARDWARE UPGRADE TO SELL

Do not offer “better hardware” on a higher Style. **There isn’t any** — the same hinge everywhere, the slide set by box depth. A rep who invents one is selling a product we do not make. Next page.

The same hardware, every Style.

Nobody buys a cabinet for its hinge. But a builder who has lost a Friday to doors that will not line up buys the next job on it — so this page is worth more to a trade customer than the finish library.

THE HINGE — DTC SOFT-CLOSE

Adjustment	**Six-way** — height, depth and side-to-side, at both leaves
Why that matters	An installer trues a door up **on the wall**. No pulling it off the box, no shims, no second trip. Houston walls are rarely square
Soft close	Built into the hinge cup. **Standard**, every door, not an upgrade
Mounting	Straight onto the side panel — there is no face frame in the way
Overlay	Set by the base plate. See page 6

THE SLIDES — SET BY BOX DEPTH

Extension	Full-extension — the back of the drawer clears the cabinet
Load	**100 lb** class, telescopic ball-bearing
Soft close	**Force Management** — a rack-and-gear module. Lower peak pull force and no jerk at the release point, unlike a plain spring damper
Mount	KV: **side-mount**, on boxes other than 21″/24″. **DTC concealed undermount** on 21″/24″ boxes
Maker	Knape & Vogt — Grand Rapids, Michigan, making drawer slides since 1898

KV 8450FM — on every Style, boxes other than 21″/24″

TWO SLIDES, BY BOX DEPTH

On 21″ and 24″ boxes — kitchen and vanity bases — the drawer rides a **DTC concealed undermount**. On other depths it is the KV **side-mount**, which you see when the drawer is open. Say which one the customer is getting.

DO NOT CLAIM

Not “made in USA.” KV is an American company with plants in more than one country and we have not verified origin for this slide. Say *“an American brand that has been making slides since 1898”* — true, and it lands the same way.

FINISHES & PARTNERS

Hardware finishes	Brushed nickel · polished chrome · matte black
Partners	Häfele · Würth · DTC · Knape & Vogt

Where the job grows.

A customer who has chosen a finish has stopped deciding. A customer looking at a spice pull-out has started again. Walk the accessory list **before** you talk about colour.

KITCHEN & CABINET

Base pull-outs

Corner lazy-susan

Spice rack

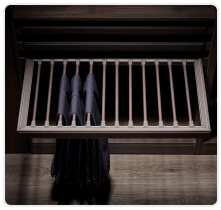

Cutlery & utensil trays

Wine storage

Also: wire baskets, waste-bin pull-outs, tray dividers, and soft-close on every one of them. Available from **Signature** up as a standard interior fittings programme; individual items can be added to an Essential job.

CLOSET & DRESSING ROOM

Trouser rack

Rotating shoe rack

Felt-lined jewellery drawer

Wardrobe lift

Lidded trays

Watch winder

Plus clothes bars, wire baskets, hampers, valet rails and pull-out mirrors. The premium set is the **Jusen "Alice"** programme — Atelier and Dressing Room.

THE QUESTION THAT OPENS AN ACCESSORY SALE

"What do you own that currently has nowhere to live?" Then stop talking. They will tell you what to sell them.

PRICING

Accessories are quoted per item on the job. **Do not price them from memory** — put them on the Discovery Sheet and let the quote come back right.

Light is what makes a finish look expensive.

A soft-touch matte door in a dim room is a grey cupboard. The same door with a lit underside is the reason somebody chose Reserve. **We sell lighting as part of the cabinetry** — so bring it up early. It is far easier to design in than to add later.

WHERE IT GOES

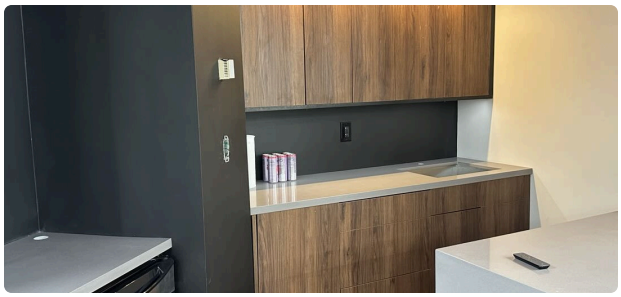

Under-cabinet	Under the wall run, washing the counter and the backsplash. The most common and the most useful
Display units	**Atelier has integrated lighting** on display cabinetry as standard — open shelving, glass fronts, media walls
Closet interiors	**Dressing Room has integrated lighting as standard.** In-shelf lighting keeps shoes and folded stacks visible
Vanity	Backlit mirrors and lit open towers — see page 15
Toe kick & interiors	Available on request across the range, priced per job

ASK THIS BEFORE YOU SHOW A SINGLE FINISH

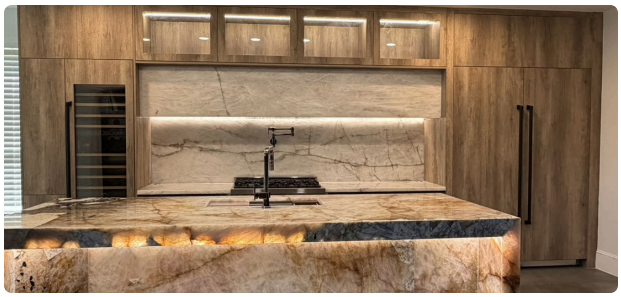

"How much natural light does that room get?" It changes which finish family you show them, and it opens the lighting conversation without a hard sell.

WHY IT IS WORTH RAISING UNPROMPTED

Lighting is one of the few things a customer can add that changes how the whole job looks for a small fraction of the whole job's cost. It is also far cheaper to run at build than to retrofit once the cabinets are on the wall.

Under-cabinet, lit uppers · coffee bar

Lit glass uppers and a backlit island

Backlit mirror and lit open towers

LIGHTING HAS ITS OWN SESSION — THIS PAGE IS THE SALES VIEW

You have enough here to **raise it, place it and sell it**. The technical detail — strip type, colour temperature, dimming and switching, drivers, and how it is priced — is covered properly in a **separate lighting tutorial**. Until you have sat through that one, put the specifics on the Discovery Sheet: *"we spec lighting per job — tell me what you're picturing and I'll come back with options and a number."* Do not guess at a colour temperature in front of a designer.

Say “twenty standard colours.” Know there are 142.

“Twenty standard colours, five in each Style, and a deeper library on request” is what you say. The internal library is **142 décors**. Both are true; only one is yours to say.

THE FIVE FINISH TYPES

Melamine	**One** resin-soaked paper fused to the core
Laminate	**Many** resin layers bonded to a substrate. Thicker, tougher
Acrylic	Glossy, near-mirror, UV stable
Paint	Fully custom colour, needs care
RTF	Vinyl film vacuum-pressed over MDF — our shaker

Melamine versus laminate is asked about most and got wrong most. **One layer versus many.**

THE EIGHT THEMES

TimberLight	Pale, whitewashed, greige woodgrains · **37**
TimberDark	Mid to near-black woodgrains · **30**
Stone	Greys, concretes, aluminium · **22**
Canvas	Whites, creams, off-whites · **14**
Terra	Beiges, clays, berries, metallics · **13**
Noir	Blacks and charcoals · **12**
Verde	Greens and sages · **9**
DeepWater	Blues · **5**

Ask which **theme** they are drawn to, then show that theme inside their line. Better than “what colour?”

Atelier · Noir

WHEN THEY WANT A COLOUR YOU CANNOT SEE

“Our library is much deeper than the brochure — tell me what you’re matching and I’ll check it.” Correct, fast, and it gives you a reason to call them back.

Gloss reflects the room; matte absorbs it. A dark gloss doubles the apparent size of a small kitchen and shows every fingerprint. Soft-touch matte does the reverse. That trade-off is the whole conversation.

The same ladder — built differently.

KNOW THIS BEFORE YOU SAY "SAME AS THE KITCHENS"

Closets are built to cabinet standards in the same plant, but **they are not the same board.** Most of the closet system is **particleboard-cored panel** — the same core as our door panels. **Some components are MDF.** If a customer wants a **plywood** closet we can custom laminate it, but that **adds lead time and costs more.** Say it that way round: it is available, it is not standard. **Never say a closet box is plywood without checking the job.**

LINE	FINISHES	FRONTS	ACCESSORIES & EXTRAS
Everyday "An organised start"	White and grey TFL	Open adjustable system, flat-panel drawer fronts	A la carte basics: clothes bars, wire baskets, shoe racks
Wardrobe "A fitted home for everything you wear"	Full 12-finish closet palette — 6 solid, 6 woodgrain	Flat panel or shaker doors	Bundles: trouser racks, jewellery drawer, hamper, valet rail
Dressing Room "The boutique, at home"	Any finish from the cabinet library, incl. soft-touch matte and lacquer	Glass-front doors, boutique styling	Premium set: watch winders, pull-out mirror, rotating shoe rack, wardrobe lift, felt-lined drawers. **Integrated lighting standard**

THREE THINGS A CLOSET CUSTOMER NEEDS TO HEAR

Half overlay. Two doors share one panel. That is the one construction difference from a kitchen, and a designer will ask.

The margin is in the organisers, not the box. An empty carcass is a commodity. The valet rail, the jewellery drawer and the pull-out hamper are not.

Adjustable, not fixed. Shelving moves on pin holes. What they own now is not what they will own in five years.

KD Lite is our free closet design tool — drag-and-drop, 3D, no CAD needed. Good for a homeowner who wants to play before committing. yudezign.com/kdlite

Walk-in · adjustable shelving, double hang

Reach-in · drawer bank and shaker fronts

Vanities sell themselves. Ask for them.

Bathrooms are one of the most requested things we do, and a kitchen customer nearly always has one. Ask in the first meeting, while you are already standing in the house.

VANITIES

Vanities **inherit the cabinet lines** — same finish library, same box construction, same DTC hinge and KV slide. There is no separate product to learn.

Depth	**21″** — not 24″. The dimension people get wrong
Height	34.5″ standard · **32.5″ ADA** (34″ finished)
Mount	Floor-standing or **floating**
Widths	3″ increments, same as base cabinets
Countertop	**Not ours.** We build the cabinet; the top is their fabricator
Lighting	Backlit mirrors and lit open towers — spec per job

THE EASIEST UPSELL IN THE BUSINESS

“While I’m measuring the kitchen — do you want me to take the bathrooms too? It’s the same trip and the same finish library.”

Makeup vanity · backlit mirror, open towers

COMMERCIAL & MULTI-FAMILY

Casework for medical, hospitality, offices and apartment communities. Typical jobs run **$14K–$43K**; multi-family runs far higher.

They buy	Compliance, phasing, and drawings their trades can build from
ADA	We build it. **32.5″** box, 34″ finished
Scale	“We quote multi-family packages up to fifty-plus units”

Hotel reception · locks, ventilated inserts

The prices you **can** say.

These four numbers are settled and you can give them on the spot. Everything else on a job comes back as a quote — and that is a feature, not a stall.

SERVICE	PRICE	WHAT YOU SAY
Design & measure	**$250** $100 if they measure	"$250 covers me coming out to measure plus two designs. If you give me your own measurements it's $100. **Either way it's credited back against your order.**"
Assembly	**$30** base or wall **$60** tall	"Your choice — flat-packed ships tighter and costs less, assembled is faster on site."
Delivery	**$350** a trip	"$350 a trip inside Greater Houston. A kitchen, a couple of vanities and a small closet generally ride together."
Pickup	**Free**	"The plant is 5802 Colfax Street, Houston. By appointment, and bring your order number."

BALLPARK IT — PER LINEAR FOOT

Measure the run, multiply, give the range. **This is the number you give in the room**, and you say the four conditions with it every time.

	SEMI-CUSTOM	CUSTOM
Kitchen · garage	**$215**/LF	**$375**/LF
Home office	$190/LF	$340/LF
Closet	$165/LF	$315/LF
Bathroom	$130/LF	$225/LF

TYPICAL JOB	SEMI	CUSTOM
Kitchen, 10×12 — 20′	$4,300	$7,500
Single vanity — 5′	$650	$1,125
Reach-in closet — 8′	$1,320	$2,520
Walk-in closet — 15′	$2,475	$4,725

THE FOUR CONDITIONS — SAY THEM, DON'T SKIP THEM

Supply only (cabinets, not tops or appliances) · **assembled** · **delivery and installation extra** · **finish and add-ons move it. Spoken only — never write a ballpark down.** A number in writing is a quote.

NEVER, FROM MEMORY

- A **per-cabinet** price — ballpark by the **linear foot**, never by the box
- A **deposit** percentage — terms are in the written agreement
- A **warranty** length — it comes with the agreement
- A **trade tier**, a discount or a multiplier
- Anything about what **we pay** for sheet goods
- A **framed** price — there is no stock sheet
- A number from a **price list you have not been told is current**

Trade pricing is real and set per account. "Yes, we run trade pricing — let me open an account for you." Then get the registration form filled.

Sixteen questions.

Out loud, without turning back. Answers are in the Answer Key §2–5.

1. In one sentence, what is frameless?

2. Do we do framed? Answer it properly.

3. What is the box made of? The back?

4. What holds the box square?

5. What does edge banding actually do?

6. Kitchen base: depth and height, and why that height?

7. Bath base depth?

8. Which door styles do we not make?

9. What is our shaker made of — and when do you say so?

10. Full or half overlay: kitchens? closets?

11. Gola or J-pull — which is cut into the carcass?

12. Which line gets the better hinge?

13. How many finishes do you *say*?

14. What is a closet box actually made of?

15. Four prices you can give on the spot?

16. A builder asks what a base cabinet costs. Now what?

WHERE THINGS LIVE

OURS

Delivered work	yudezign.com/portfolio
Public finish library	yudezign.com/finishes
Booklet, guides, flyers	yudezign.com/downloads
Closet design tool	yudezign.com/kdlite
