LAYOUT SKETCH

Rep _____ Date _____ CLT-_____

MARK ALL OF THESE ON THE PLAN

- Doors and windows — and which way they swing
- Water supply, drain, gas line
- Outlets, switches, light fixtures
- Range hood vent, HVAC vents, returns
- Beams, columns, soffits, radiators
- Where the floor or ceiling height changes

MEASURE IN THIS ORDER — HORIZONTAL

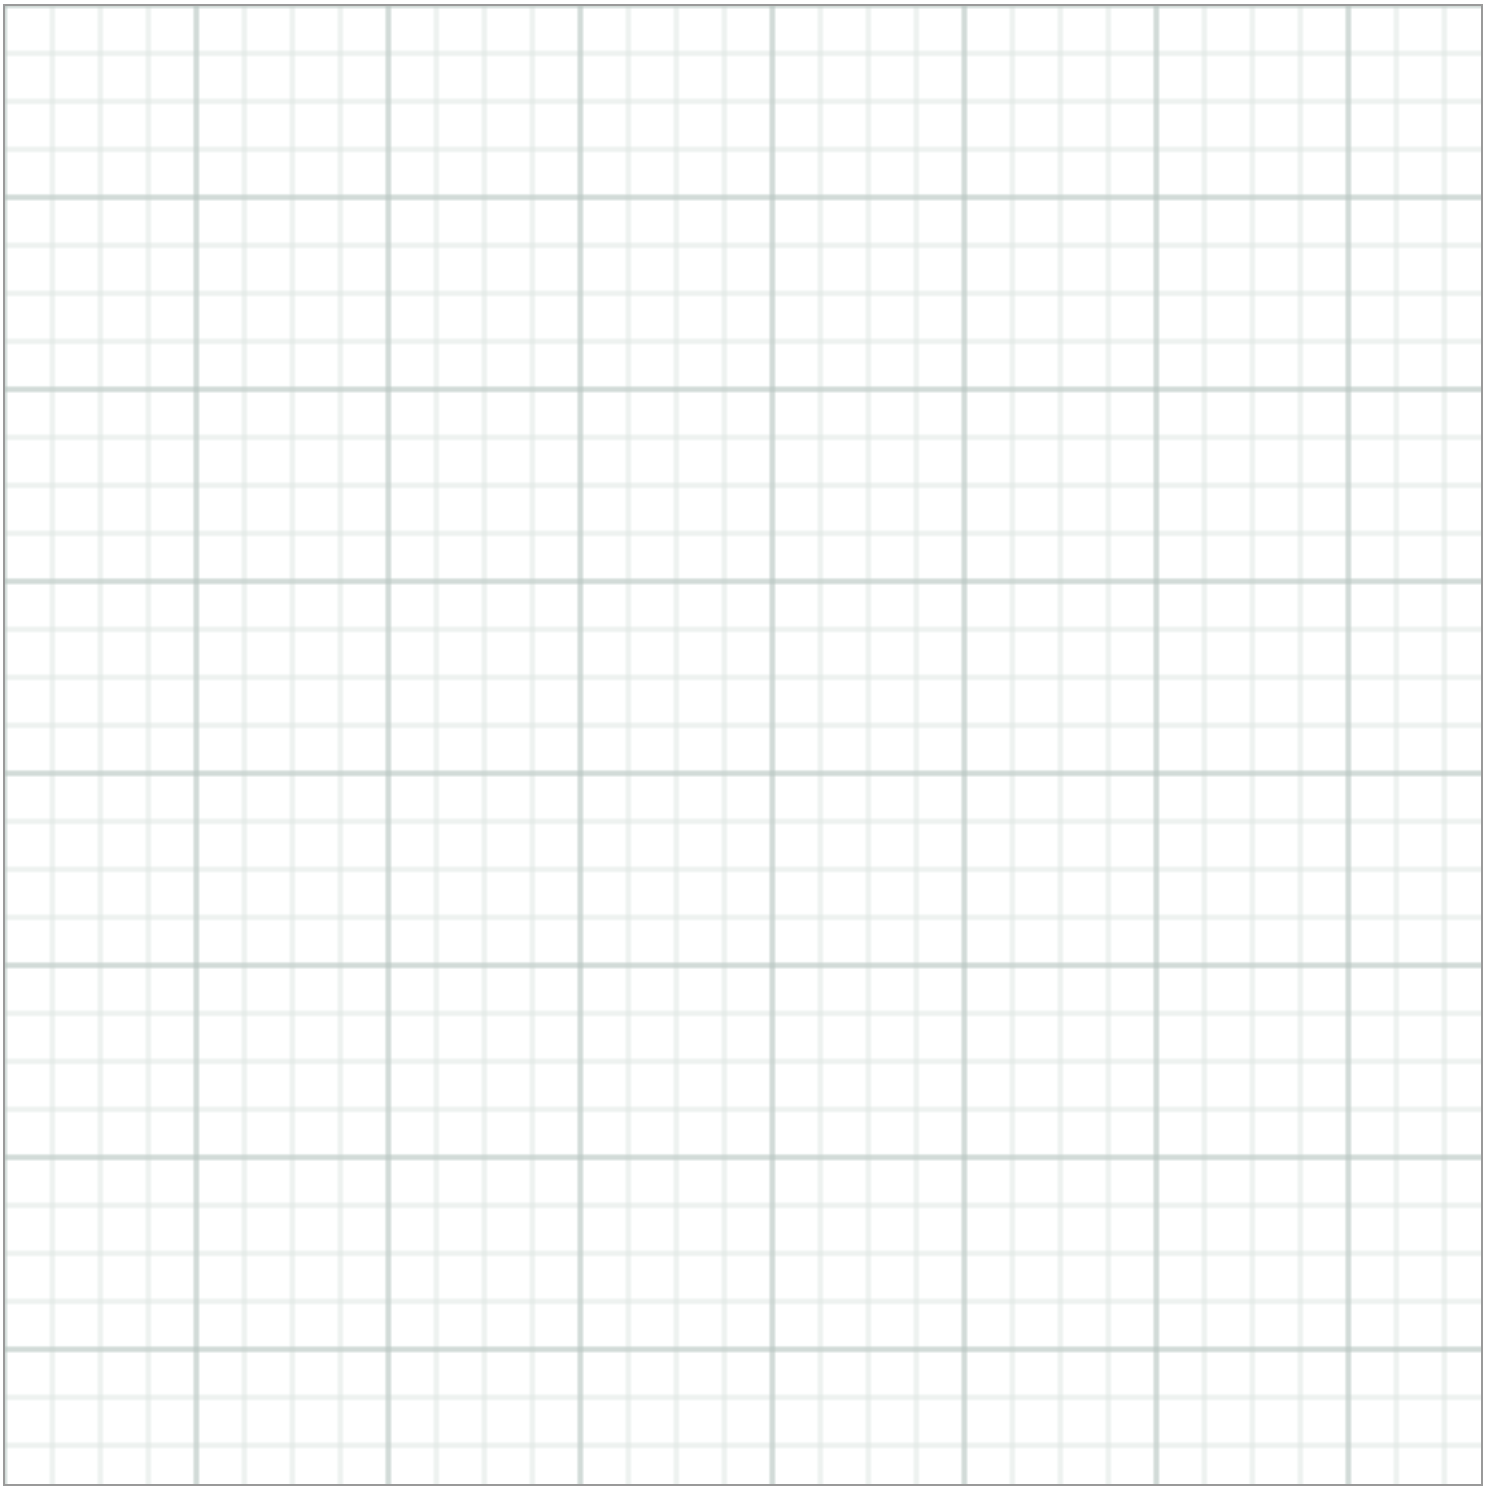

1. Wall to wall, at 36″ off the floor
2. Corner to the first opening
3. Across the opening, trim edge to trim edge
4. Trim edge to the far wall
5. **Add 2 + 3 + 4 and compare to 1.** If they disagree, one of them is wrong — re-measure before you leave

… THEN VERTICAL

6. Floor to window sill
7. Sill to top of window
8. Top of window to ceiling
9. **Add 6 + 7 + 8 and compare to floor-to-ceiling.**

SCALE

- One small square = **3 inches**, so four squares = one foot. Write the real dimension on every run anyway — the grid is for shape, the numbers are for building

Before you leave site: both sum-checks agree · every appliance and the sink measured, not guessed · photos of the room *and* of the plumbing and electrical · anything you couldn't reach or see, written down as an unknown rather than an estimate.
